

Legalese

by Preun BB

"Wake up, sweetie!"

Ross blinked his eyes open groggily. A bright lamp, turned directly into his eyes, blinded him. He was on some kind of rubbery couch. He was lying back, his legs spread apart. He was totally naked, and he felt like he had been clubbed in the head.

"Ooooh, sorry about that, dear! I know those pills I slipped you last night left you with quite the headache. I'll turn the lights down." His eyes readjusted, and the room came into focus. Between his legs was a nurse in her mid-30s. She was pleasantly thick, with wide hips and a full chest. Her hair was black, with a thick streak of cyan through it.

"I'm sure you're aware of what this is. We've messaged you multiple times."

"Of course, I'm sure you've heard of the Penile Necessity Assessment law that was passed last year. I'm sure ALL the guys know about it. Madam President has been broadcasting announcements on every channel for weeks!" Ross gulped in terror. He'd heard of the law; who hadn't? It was the landmark penectomy case, *Johnson, Andrew v. Johnson, Melody (née Smith)*, in which the Supreme Court had ruled that the penectomy clause of the former Johnson's marriage prenup didn't violate any laws that had unleashed the floodgates on dick-snipping contracts and laws countrywide.

Penectomy became a common condition in prenups, NDA's, and non-compete clauses across the country, and soon became a common element of passed legislation. Across the country, state legislatures took advantage of the new leniency, mandating partial and complete penectomies for anything from first-degree murder to shoplifting. As Justice Allred stated in the Majority Opinion, "the pursuit of happiness specified in the Declaration of Independence only guarantees a male's right to breed; the Court does not find a penis necessary for such activities."

This culminated in the Penile Necessity Act, which mandated nearly all men lose the entirety of their male organs, for no other reason than preventing possible future crimes. Allred went on to say that, "since some males have been proven to be able to orgasm through anal stimulation only...Nothing guarantees these men the right to their penises. In fact, given the proven correlation between rape rates and intact male genitalia, the Court finds it in the best interest of the states to ensure that all unnecessary penises are removed, posthaste. Of course, those men who are unable to cum from prostate stimulation alone must be allowed to keep their whole penises."

Assessments rolled out slowly, but randomly. Many a man found himself waking up in similar clinics, tied down with a friendly nurse between their legs, squirming and gasping as a relentless vibrator pressed against their prostate, milking out a life-changing orgasm

against their will. If they could resist the urge to spurt their load, they could go home with their cock still safely attached to their groin. But if testing proved that they didn't actually need their penis to orgasm...

He cringed at the full bottles adorning the walls of the office. Penises of every length, girth, cut and uncut, pale and tanned and every color in between, floated mockingly in their jars of formaldehyde. Ross swore to himself he wouldn't be filling a jar today.

"I knew the law, but...I thought...the government is slow, I thought...I thought inspections were years away."

She giggled at his confusion. "Don't be stupid. With all females in all government positions, our bureaucracy has never moved faster! Especially on laws that help 50% of our population out. Every woman will feel safer, knowing that we remove thousands of unnecessary cocks a year."

The nurse reached into a drawer beneath Ross's puckering hole, and pulled out a moderately thick, 7-inch pink silicone dildo, as well as a generous bottle of lube and a gag. She gagged the poor man.

"This is as much for you as for me. I don't want to hear you, and you don't want to bite your tongue off!"

Lubing up the dildo, the nurse gently probed Ross's tight buttock with it, then slid it in gently when she'd worked his sphincter loose enough for it to fit.

He squealed and bucked against the restraints. The rubber cock pressed against something deep inside him, something that had never been touched before. To his horror, his cock twitched to life, his modest four inches bobbing happily up as he lost his anal virginity. The nurse smiled. "Oooh, that's not a great sign! Most boys are still soft after their first entry. I hope you can handle the pounding stage."

He trembled at her words. "Sweetie, relax." How could he relax when he was so close to being penectomized? He shook his head in terror. She sighed at his idiocy. "No, I mean it, relax. The tenser you are, the harder you hold onto the dildo. It increases prostate stimulation a lot. If you want to last until the end, you need to think about something other than your cock being removed. This is your first visit, so you don't need to last long this time. Just hold your cum in for three minutes if you want to keep your cock, okay? On later visits, you'll need to last longer, as you get more used to getting fucked."

He heard a beep as she started a timer with the hand she wasn't using to rhythmically ease the cock in and out of him. Ross tried to put every sensual thought out of his mind. He tried everything to ignore the feeling welling up inside of him. He pretended to ignore his testicles drawing up happily in his sack, getting ready to contract and spray. He failed to stifle a girly moan as the pink cock pressed deep inside of him.

At the 2:50 mark, the nurse sped up considerably, and Ross's cock covered itself in a thick spurt of precum. Ross managed to hold the more potent contents of his testicles inside himself for the last ten seconds as she pounded him as hard as she could, although he could feel his cum boiling at the base of his penis.

"Damn," she muttered. He had made it through this one. She slid the dildo out of him slowly, and...

spurt

A small white bead of cum ejected itself from the now-doomed cock right as she slid the dildo out. To his horror and her elation, a huge, stringy white ribbon followed that tiny drop. Ross's cock was joyfully ejecting its load *after* his stimulation was over, mindless to the fate it had consigned itself too. Ross bawled openly as he continued spurting for the final time as a complete man, totally untouched, and with his ass aching empty. He suddenly missed the feeling of fullness between his cheeks, that stiff unrelenting pressure against his secret g-spot inside of him, and at the same time despaired that he was about to lose his own dick. His final orgasm had been as ruined as could be.

"Wow! Congratulations, you really held that in! I've never seen a guy cum AFTER being fucked! I really hope that felt good for you." She smiled down at him. "Of course, the courts are still quite loose on what we should do with you in this case. They tend to default to 'safe' decisions though, and since penis removal is the safest option with the fewest downsides, I'm sure they'll side with our decision to cut you."

He looked up at her despairingly, but she was already readying an elastrator. "Normally this is meant for balls, of course, but it functions quite well for cutting off circulation to the penis." She slid the incredibly stretched-out rubber band over his penis.

"Can't I keep something? Just an inch?"

"Nope!" She pushed the rubber band right to the base of his dick. Then she slid a hard catheter through his still-hard cock, his urethra still lubed by the remains of his unfinished climax. The thick tube slid in with some resistance, stretching his urethra

painfully to its limits and pushing out more gooey cum behind it. He could feel his dick stretched nearly to the point of tearing, and was briefly worried about permanent damage she might be doing, before realizing it wouldn't matter much longer.

When she wrapped her hand around his cock to push the catheter all the way to the base, he twitched and moaned, and his cock shot out one final cum shot, the paper-thin ribbon of white squeezed out at incredibly high pressure in the tiny gap between the catheter and his urethra. She let go of his penis disgustedly and slipped the band off the elastrator, cutting him off mid-orgasm as the rubber band shut the blood vessels to his dick off.

He cried out at the knife-sharp pain of even that last little orgasm cut short. His dick twitched and bobbed, pointlessly trying as hard as it could to push his sperm past the cruel barrier, as if it was actually one last chance to pass on his genes. But the rubber band was stronger than his erection, and not a single extra drop of cum made it out as his penis quickly wilted.

"Now for just one more..." She repeated the process, the second rubber band a few millimeters above the first.

"Now we just cut right here, and..." She slid her scalpel between the two tight rubber bands, and Ross screamed as his penis separated from his groin. She drove her scalpel through the pinky-sized cock, and finally cut through the catheter and removed his modest manmeat.

"And...there we go! Julie at the front desk will come by when you're recovered. We've got some paperwork, bills to pay, etc... Otherwise, your surgery is complete!" She smiled broadly at the dickless man. "We have replicas of this dildo at the gift shop, if you would like something to remember this by."

He nodded miserably. He knew he would pick one up on the way out. He still needed to cum.

Until next time

You made it to the end. Hopefully your gonads are more functional than the ones you just read about.

I love hearing from readers. Whether you've got feedback, a request, an oddly specific scenario you've been dying to see written, a unformatted wall of text meticulously describing each and every ballbusting fantasy you've ever masturbated to, or just want to correct all of my typos, drop me a line.
