

Nash Equilibrium

by Preun BB

Cathy went through her checklist to make sure she hadn't missed any steps in the setup of her experiment. Subjects were difficult enough to obtain already, and her principal investigator wanted this reproduced many, many times to ensure the scientific integrity of her results. Screwing up any step would mean she'd have to discard this session's data entirely, and these poor boys would lose their testicles for no reason.

She walked into the soundproofed room where her three subjects were each strapped to an X frame against the wall, on two large sets of rollers so that their position could be adjusted to a supine position. The triplets were cuffed securely at ankles and wrists, their legs spread wide enough for their important bits to be easily accessible. It wasn't totally necessary that they all share the exact same genetic makeup, but it did reduce confounding factors in her results, such as varying penis size and sex drive. She had managed to snag a pair of impressively equipped triplets. Subjects 1, 2, and 3 all stared at her wide-eyed, their red rubber ball gags doing an excellent job at muting them.

"Hello boys! Thank you for... 'volunteering' for today's experiment! My area of research is Game Theory. Have any of you heard of the Prisoner's Dilemma?"

Each boy stood silently and motionless, obviously terrified. They were trembling nervously, and subject 1 looked as if he might burst into tears.

She sighed. She tried to keep her experimental procedures as confidential as possible, but some of her previous subjects must have squealed. This was extremely unfortunate. She'd preferred to keep the details of her tests totally confidential until she had a chance to explain in detail what they consisted of. If boys started finding out she might castrate them, they would probably be less inclined to sign up for the experiment pool.

"Well, we're going to go through a little experiment to teach you about it. Each of you wants to leave this room with at least one testicle intact, correct?"

The boys nodded, and the boy on the end widened his eyes at the question. At least one of them didn't know what her specialty was.

"Each of you had one remote in each hand. Each remote corresponds to a vote. You can only vote once, and you must each all vote; if anyone doesn't choose one, you ALL lose your balls."

"The right choice, the 'selfless' vote, just costs you one of your balls. The procedure is quite fast, but the department doesn't have the budget for painkillers, before or after, so it IS going to be a little bit painful." She grinned. "You will also need to see a nurse down the hall for some quick post-op work."

"The left one, the 'selfish' one, will count as a vote for that man to keep both of your testicles. Unfortunately, this comes at a cost: two testicles will have to be taken from OTHER participants. See the dilemma?" The middle boy nodded in horrified comprehension, but the other two didn't seem to quite get it. She sighed deeply. Guess she'd have to walk them through the whole thing.

"Each 'selfless' vote removes a testicle from the entire pool of nuts, and each 'selfish' vote removes two. Since you each must cast a vote, the minimum number of testicles taken is three; if each of you casts a 'selfless' vote, you all come out of this with a half-filled scrotum, but you could still have children."

"However, if even a single one of you casts a selfish vote...Well, that voter would get to keep both of their nuts, but both of their brothers would lose their balls entirely. And if all of you gave in to the temptation to keep both of your balls, you'd all come out castrated!"

"I'll be taking your ball gags out and allowing you to discuss your strategy among yourselves. Voting will be done in the dark, so you'll have to trust each other to stick to your plan. No showing each other your votes." She smiled. "Remember, even one selfish vote screws over $\frac{2}{3}$ of you. Now, any questions?" She pressed a button on her tablet, and their gags slid off.

Subjects 1 and 3 looked dazed and depressed, and Cathy frowned. She was worried they didn't understand the rules. That could seriously contaminate the data.

Subject 2 cleared his throat awkwardly. "What...Miss, what happens if 2 of us vote selfishly and 1 votes selflessly? It seems like...Well, it's ambiguous who keeps...who keeps one of their nuts, right?"

She beamed at him. At least he understood; he could explain everything to his brothers. "That's correct! We allow the selfless one to keep his nut in that case. Seems karmic, doesn't it?" Subject 2 lowered his gaze. She couldn't tell if he understood, or if he was nauseated by her casual discussion of his possible castration.

"Good luck!"

Cathy left the room.

She returned 10 minutes later. The three subjects had voted, and she carried a readout of their results on her tablet. She sent the command to place the ball-gags back on, and stood in front of them, tablet facing away from her now-silent subjects.

"So, here we go. Looks like our votes are..."

"Selfless, subject 1. Very kind of you! We'll begin with your left testicle. I'm going to rupture it now, ok?" She smiled sadly up at him. "Sorry, we're a bit strapped for cash, so we can't afford one of those fancy laser-precise autocauterizers. We're going to have to use a process that's a bit more manual and painful."

1's eyes went wide. Cathy got between his legs, and isolated his left testicle in the fleshy sac underneath both of her thumbs. "Take a deep breath, this is going to hurt." Her thumbs sank in, her other eight fingers pressing the nut cruelly from behind, while tearing it apart horizontally. The tearing from her fingers and the pressure from her thumbs would cause the nut to split in half. It was a technique Cathy had perfected, and it never took long to do its job.

Squelch

The poor boy's nut gave way to the pressure, and her fists closed around the two halves, instantly liquefying them. She stood up and wiped her brow, proud of her handiwork. No semen, no blood, no tears. Well, plenty of tears from her victim, who was bawling in agony and humiliation, but no tears in the scrotum. Quite a neat job overall. Cathy glanced down at her clipboard and walked over to the next boy.

"Subject 2, you choice...Selfless."

Subject 2 was staring at his poor brother's half-mushy ball sac. Cathy got between his legs. His testicles were significantly larger than his brother's, and they hung low in the sac. He swallowed audibly and rolled his eyes upward, not willing to watch the loss he was about to endure.

Cathy gently took his right testicle in her hands. Even with both hands, her fingers could barely reach into the tender area in the back. She tried to get a good grip on it, but it was much more slippery than the last one. It squirted out of her grasp, causing her to pinch the nut painfully and eliciting a muffled squeal from its owner. However, it remained completely intact.

"Jesus christ! Fine, we'll do this the other way."

She flipped a latch on the side of his X frame and rolled it down. Her subject was now laying spread-eagle on the floor.

Cathy sighed apologetically. "Sorry, I know I said this would be fast, but you have quite sturdy testicles! I sure hope your other brother doesn't vote selfishly. I'd hate to have to go through the effort of popping both of these."

Cathy rested her foot gently on the good-sized testicle, and slowly leaned into it. Her weight was almost halfway on it when the subject began a high-pitched keening. She knew it would still take quite a bit more of her weight, but that was a good sign that she was making progress.

She shifted her weight again, and a barely-audibly *crunch* came from under her foot. The nut was noticeably flatter. Subject 2 seemed to realize she had passed the threshold of a weeklong bruise, into some serious, permanent damage.

She lifted her right foot up entirely. Her weight was now entirely on the left half of the poor boy's manhood. He screamed through the gag, and suddenly her left foot met the floor.

Squelch

She gave a tiny grunt as the nut ruptured and she dropped down an inch. The scrotum beneath her foot was pressed flat, but the other half of his ballsack was clearly full of mush, as well as his one remaining nut.

"Phew! Sorry that took so long. Are you doing ok down there?" The one-balled boy below her whimpered pathetically. He was somehow still conscious, but far beyond the ability to respond to her. She lifted her foot up and brought it down again, grinding his testicular mush out like a cigarette to make sure the remains of his testicle were far beyond repair, then walked over to her final subject.

"And subject 3...Your vote appears to be..."

"Selfish."

The first two brothers stopped screaming and stared at her, as if they tried to imagine she hadn't just spoken. The third one was wide eyed and screaming, his words almost audible through the gag.

"Well, that's quite unfortunate for you two! I really thought you would be able to make it. Guess your brother really wanted to keep his balls!" She walked up to subject 3, and shook her head disapprovingly. "You really just couldn't make the same sacrifice your brothers had, could you? You couldn't ask me to take just one of your nuts? You had to neuter both of your siblings, just so you could walk away a complete man. I really hope you can live with yourself after this, subject 3." She snuck a glance at the other subjects. Their expressions had gone from pain, to loss, to terror, to anger. She smirked. They blamed her brother for castrating them, not her. Incredible.

"Well, let's do this!" She rolled the X frame of subject 2 up, and snaked each of her hands in between the legs of the soon-to-be eunuchs. Each boy's eyes lit up with horror as she sifted among the mushy contents of their scrotums to find each of their last remaining testicles.

She started pressing each of her thumbs into their respective testicle. Their owners' screams were muffled by their gags. "Just think, if your brother would have given up just one of his nuts, neither of you would have to go through this. You could have lived out the rest of your lives as three one-nuts. The procedure is painful, but losing only one nut doesn't change things THAT much for you." She met the eyes of subject 3. "But it is quite painful, as I'm sure you're aware. You shouldn't blame your poor brother for wanting to avoid it this badly."

The first subject's testicle was, predictably, almost giving way already. Cathy clenched her right hand together harder, squeezing the fatter of the two balls through her fingers as tightly as she could. Its owner bucked uncontrollably at the considerably harder pressure on his last remaining piece of manhood. It wasn't necessary for the experiment, but she prided herself in being able to time testicular rupture precisely. She didn't want one boy popping much earlier than the other.

Each boy wore an expression of pure agony mixed with despair. Cathy wondered what was going through their heads as her fingers slowly went through their balls. Were they contemplating the long, sexless life ahead of them? Maybe wishing they'd passed on their genetic material while they were still men? Hell, they might even be virgins. They were young enough. Maybe they were thinking about how this was the first and last time a woman would ever put her hands on their genitals.

Or maybe they couldn't think about any of that, because of how much she was hurting them. Cathy always wondered about the exact mechanisms that drove pain into men through their balls. As she squeezed tighter, she saw their expressions tense up even

more. She could feel the damage she was purposefully inflicting on their last nuts. They wouldn't last a lot longer...

Splurt

Splurt

Despite their size differences, both testicles gave way at the same time. Cathy pressed the mushy remains of their testicles through her hands, kneading their sacks until nothing solid remained of their balls. She watched as the larger of the two boys let out his "extinction spray" (she was glad her terminology had caught on), and spewed out the massive, chunky load that would be his last ever. She felt his large mushy sack contract as his body desperately tried to unload the last genetic material he would ever produce out onto the world. His final load splattered grossly onto the cold laboratory floor.

Cathy knew she could scoop it up and send it home with him, let him get it frozen and stored for a future partner. 'He' was moaning and screaming through the gag, probably begging her to do exactly that. She smiled sweetly at him and pretended not to understand. She hated touching eunuch cum, and knew some assistant would be tasked with cleaning up the disgusting mess later. The smaller 'boy' didn't get the same opportunity for his last cum. She saw 'he' was staring jealously at the enormous white puddle being forced out of his brother's cock.

"Well, you two are free to go! There will be nurses waiting outside for you. They'll escort you to the surgical suite so we can remove your shattered balls and stitch you up nicely. They'll walk you through post-surgical procedures, and changes to your sex life that will be occurring shortly. Well, namely...You're not going to have one." She smiled easily as she described the symptoms they'd be experiencing. "Total loss of libido, inability to maintain an erection, penile shrinkage, fantasies of having your penis removed, phantom testicular pains, depression...well, I'm sure you two will be able to deal with it all. Off you go!" She untied the two newly made eunuchs and helped them out of the room, where two orderlies whisked them away.

She closed the door behind her and returned to the room with the last remaining branch of the brothers' family tree in it. Her subject was still restrained, legs apart, balls open for abuse. She removed his gag roughly, and he coughed out a question.

"Why...I swear, I...I chose selfless, why did you...why did you castrate them?"

She laughed at him. "Honey, the experiment was about seeing what choices you boys would make. Once you made them, the procedure is set, because we already have the data we need. We don't actually need to follow the rules of the game that we set."

"But...but they're going to hate me for the rest of their lives."

"Well, for a bit. Trust me, once boys lose their sources of hormones, they have a much harder time holding onto that kind of anger and resentment. Of course, they're always going to feel incomplete, and they're never going to forget being castrated, and they'll miss having a functioning set of cock and balls. but...well, that's more depression than anger."

"Anyway...I can assure you, they're not going to be too mad at you once they see what YOU'RE signed up for. The reason we let one of you keep your testicles is that, for part two of our study, we need a fully intact male. So, this procedure kind of ensures us a two-for-one off you! After all, you already signed away your testicles to us for the first procedure. No reason to waste a perfectly good consent waiver!"

Subject three began to weep silently.

Until next time

You made it to the end. Hopefully your gonads are more functional than the ones you just read about.

I love hearing from readers. Whether you've got feedback, a request, an oddly specific scenario you've been dying to see written, a unformatted wall of text meticulously describing each and every ballbusting fantasy you've ever masturbated to, or just want to correct all of my typos, drop me a line.
