Introduction: Corporate Orientation

Olivia sat in the corporate foyer, holding her briefcase. Her heart was thumping in her chest; she hadn't been this nervous for anything since finals this year. Like every ambitious young woman in her sophomore class of Western U, she'd lined up an internship for the summer. And not just any internship: the *dream* one. Every girl in her Macroeconomics class was jealous when they heard she'd gotten the OverEasy job.

Any other megacorp of their size would've had an intern class of thousands, but only a handful of similarly pantsuited anxious Type-A women sat in the spartan, lofty white atrium. A door opened, and a woman with a poof of frizzy black hair stepped out. She was wearing a lab coat and goggles, and her black rubber gloves were smeared with streaks of white and chunks of pink. Wiping her gloves off hastily on her lab coat, she lifted her goggles and looked at her clipboard.

"Olivia?" She announced to the eager room.

"That's me!" She jumped to her feet and extended her hand. The scientist peeled a glove off and shook her hand.

"Nice to meet you, and welcome to the OverEasy Quality Control internship! Congratulations on passing our *very* high bar."

"Thanks! I've been a huge fan of your — er, I guess *our* — products for years. I can't tell you how many times my Nutcracker and Sterilizer have come in handy, and I'm so excited to see all the new stuff. I mean, I promise I'm not going to leak any of it online, I just... sorry, I'm gushing. Nice to meet you too!"

Cathy laughed. "I totally understand. I remember my first day at OverEasy. I normally work in Research and Development, but I'll be your onboarding supervisor for today and will walk you through how things work around here. The internship is largely self-supervised — hence why we prefer self-starters like yourself! — but for your first few days I'll walk you through everything. Let's get you to your station!"

The quality control lab was everything Olivia had imagined, and more. Every surface was crowded with testicular torture devices in various states of disassembly. Some looked familiar, like the Sterilizer taser and the little cylindrical metal Nutcracker. Some were

more mysterious. A transparent, hollow rubber device in the exact shape of a penis and scrotum and the vials of silvery, viscous goo that seemed to move by itself looked fascinating but equally impractical for halfstrating an inconveniently handsy frat bro.

On the wall were two thick rails, emerging down from two holes in the ceiling and running parallel along the wall. On the far side of the room was a touchscreen terminal, with a haphazard array of screens mounted above it. Cathy led Olivia over to it.

"This is for starting and stopping a quality control test." Cathy pointed to a smaller one near the terminal, with a conspicuous red button beneath it. "Hit it once to bring up instructions on the screen and bring your assigned subject into the lab. He'll slide down on those rails. He'll always be naked and bound to an X, but depending on the exact test procedure, may be muzzled, blindfolded, and missing up to one of his testicles already."

"So it's true?! We really get to use live men for all of our tests?"

"Of course! We can't exactly test most of our products without a real pair of, um, gonads. The men all sign waivers when they come in and are adequately compensated for whatever bits of their genitals get shattered, snipped or gouged. It's totally consensual and legal."

"Wow," Olivia said, starry-eyed, "So I get to just...destroy balls all day, every day?"

"Well, it's a bit more complicated than that. Most people know our self-defense products best — and yes, we do have to rupture an enormous number of testicles to thoroughly test those. But OverEasy has a wide range of products. Tools for increasing or reducing male fertility, at-home vasectomy kits, medical auto-milkers —" she gestured to the clear rubber device.

"If it attaches to, injects into, crushes, crimps, stimulates or otherwise interacts with male genitalia, we likely make it. And many of our products are not actually meant to cause permanent testicular damage."

"Oh." Olivia sounded disappointed. "Do I get to choose what product I test?"

"Nope. We intentionally randomize the procedures as much as possible, both to test your capabilities during your internship, and make sure you don't get bored repeating the same test over and over."

"I'd never get bored of testing a Nutcracker," Olivia mumbled.

Cathy chuckled. "I understand the enthusiasm, but at the end of the day, we *are* a business, and we need to test products besides the most fun ones. Anyway, if you do well enough here, you might be able to snag an apprenticeship in R&D. We're on the cutting edge up there. Quite literally, sometimes." Cathy winked to the intern.

"But trust me, you'll have plenty of fun down here. Let's see what your first test is for the day."

Cathy tapped a few commands into the console, while Olivia paid close attention and took notes.

Wheels squealed against the rail, and a massive X-rack rolled down from the ceiling. A naked man was tied to it. He looked to be in his mid-20s, with black hair and a lightly muscled body covered in goosebumps from the chill of the lab. With all four of his trembling limbs attached to the frame behind him, Olivia got an eyeful of his balls, and her jaw nearly dropped.

Hanging between his legs was the largest set of testicles Olivia had ever seen. He'd been shaved completely from his waistline down to his mid-thigh, so his balls were hairless enough for her to make out that they were completely smooth; the lucky man's manhood stretched his ballbag out so much there wasn't enough slack for wrinkles. A small, clear electrode was attached to the back of each glorious gonad, right on top of his epididymis, their respective wires disappearing into the wall behind him.

Cathy tapped a few more buttons on the pad, and projections lit up the wall behind him. An exploded, cross-section view of two testicles took up a full two square feet, with dozens of readings, statistics, and data graphs arrayed around them. A thick green bar spanned the width of the entire projection. Its label read "overall estimated testicular functionality: 100%".

"This is our data display. It'll give you every piece of data about his balls you can possibly want: sperm counts, hormone levels, heat maps of his circulation, chances of future fertility, estimated erectile capacity — frankly, you'll end up ignoring lots of this stuff in practice."

She pointed to the image of his testicles and the prominent green bar. "These are the most important things to keep track of: the heat map of his testicular circulation, and the OETF reading. The map of his balls will show you exactly where the injuries you cause happen in his balls. Green areas are healthy and fertile. Yellow are starting to take some damage, and indicate at least some temporary loss of fertility. Orange sections are

permanently damaged, but still contain a little life. And red areas are so badly damaged, they'll never meaningfully recover — effectively, sections of his balls that have been completely killed by whatever device you're testing. Allow me to demonstrate."

Kneeling between the man's legs, Cathy pulled her elbow back and drove a hard uppercut to his naked balls. He let out a pained *oof* as she drove his balls up into his pelvis, flattening the left one particularly hard against himself. On the projection above, Olivia saw a small yellow splotch bloom in the corresponding section of the display, and the green bar beneath moved an almost imperceptible fraction to the left; its label now helpfully read 99.94 percent.

"*FUCK!*" he whined, his eyes watering as he stared in horror at the projected diagram of his balls.

"The Overall Effective Testicular Functionality, or OETF, is basically just what it sounds like: a holistic reading of how intact his entire manhood is. It's an estimation, based on a complex weighting of all of the different things a testicle can do, so you'll need to read the other displays to know exactly what's going on in those gonads."

"A boy can have severely degraded OETF and still have most of his sperm count, for example, but his balls might no longer produce a single drop of testosterone. Or his nuts might have so many ruptures that nutmeat is leaking out of them like water through a sieve, and his sperm is permanently malformed and non-motile, but somehow his testosterone production is still mostly intact. Testicular damage is multi-dimensional, and we can't describe it ALL in a single number. That's why we have all of these different readouts! Still, the OETF is a great overall look at how close he is to castration."

Throughout Cathy's monologue, the attractive, well-sculpted man before her had gone from looking pained, to agitated, to downright nauseous. At her last word, he let out a whimper.

"Um...excuse me, ma'am? I'm so sorry for the inconvenience — I think I'd like to back out of the experiment, actually. I'll forfeit my compensation, I promise. I'd just really like to go home now."

Cathy pulled a ball gag out of a nearby drawer.

"I'd recommend using a gag on them too, at least until you get the hang of the job. They can be *incredibly* annoying when you're trying to work. Some of the tests you will need to actually listen to and assess their emotional reactions to ensure product quality, so you

can't gag them for those ones. And of course, it can be fun to chat with them as their balls fall apart. But for now, let's see if we can't get some peace and quiet here for your very first quality control test ever."

She shoved the gag into the man's mouth and secured the straps behind his head.

"Now, let's see what product you'll be testing today. Hit that button there." Olivia pressed the glowing red button next to the trembling naked man. A hydraulic tube next to him activated with a percussive *thoup*, and the chamber opened up to release the delivery cylinder inside. Olivia took it out and opened it.

Chapter 1: XXXL AutoMilker

Inside was a clear, rubbery object, shaped like some combination of an oversized chastity belt and a fleshlight. A droopy translucent sack hung below its long phallic body. The whole thing was clear rubber, save for the stiff black ring at its base.

Olivia could take a guess where she would attach it, but she made sure to read the instructions inside the tube first.

"An...automilker?"

"Yup. I'm sure you can guess what it does; it's basically what it sounds like. We sell them to hospitals for taking semen samples from unconscious or unwilling men, and to prisons for wardens to use as rewards for obedient inmates...or, sometimes, punishment."

"Punishment? Doesn't it... 'milk' them? I don't see how that can be a punishment." Olivia picked up the thing with two fingers, looking at it disgustedly. It was definitely not one of the self-defense tools she'd been hoping to test. The nude stud strapped to the wall was staring at it, wide-eyed but eager, his previous objections to testing forgotten.

"A single milking? Yeah, it's not much of a punishment. But this lil guy can suck absolutely every drop of cum out of a man, even when he's well past enjoying it. Trust me, a denied inmate or patient might be grateful for the first, second, or even third sample it extracts, but once he's well into his thirtieth cumshot and his overstimulated cock can barely produce a painful trickle of water, he'll beg to stop. The best part is, the courts ruled that it's technically not torture!" The naked stud's optimistic look had vanished. He now struggled and shook against his restraints again, even as his cock gave an involuntary twitch at the promise of what was to come. Cathy and Olivia ignored him.

"There should be a set of test procedures in the tube. Read them thoroughly, then follow them, then report any irregularity." Cathy unfolded the square of paper and read it through.

"Let's see. You'll need an erection first, sir." Olivia eyed the half-hard cock before her. "This shouldn't be too hard."

Donning a pair of latex gloves, Olivia squirted a few dollops of lube from the nearby dispenser and got to work. One hand wasn't quite enough to fit all the way around his cock, so she circled his glans with both and slid her hands down, slowly and lovingly coating his entire length in slipperiness. Then she began to jerk, her hand sliding

smoothly up and down the massive pink organ. She looked up at him and smiled, well aware he had a great vantage point to look directly down her rhythmically jiggling cleavage.

As much as she loved destroying their balls, Olivia was well acquainted with the less painful bits of male anatomy, and in no time she had his flagging cock stiff and quivering. When she'd got him right on the edge, as indicated by the fine spray of precum each rapid stroke liberated out of his cock and onto her expensive new blouse, she stopped. His moans took on a whiny tone as she unclipped the ring at the base of the milker.

The thing was massive, the label proclaiming it "XXXL", yet the stiff plastic ring looked just barely large enough to fit around the base of his cock and balls. She slid the sleeve over his slippery member, then lifted his balls up and attempted to navigate them into the matching translucent silicone pouch below.

A generous dollop of lube smeared around his nutsack helped ease them inside, but even so, she had to use a fair amount of force to stretch the pouch large enough to cram both plum-sized gonads inside. Ignoring his pained squeaks, she pulled the ring down around the entirety of his cock and balls and forced it closed, securing the entire package neatly inside its slick, tight prison. Snapping the ring shut around the base of the constrained manhood took just about all of her strength.

"Good job! Don't be afraid to put your back into it. That's definitely a tight fit."

"Should we have sized him up?" Olivia asked. "Tested a larger model on him?"

"If we *had* a larger model, sure. But this is the largest milker we make. It doesn't quite fit guys way on the end of the size distribution, like our well-endowed subject here, but it's just not economical to manufacture a special size for the one in ten thousand men too large to fit in an XXXL milker. If a hospital or prison actually needed to milk him for some reason, they'd have to cram him into one this size anyway."

Cathy smirked. "Besides, you can see from his readout his fertility is still well within healthy bounds, despite the discomfort he's feeling."

The translucent silicone was stretched taut, and his formerly relaxed, saggy balls bulged against it. Olivia could see the flesh-colored orbs gradually turning white, angry blue veins pulsing against the surface.

"And they tend to shrink a bit as their cum drains out. Here, attach the collection tube and let's fire it up." The man was whimpering, but Olivia couldn't tell if it was from pain or anticipation. She screwed the rubber hose connecting the large empty cylinder to the collection port at the top of his cock. Then she flipped the switch on the side of the contraption, and the silicone sleeve whirred to life.

The rubber cock sleeve began pumping, contracting and expanding slowly and rhythmically, squelching wetly with lube and precum. Olivia watched as it squeezed the head of his cock, then contracted down his shaft, then expanded again, the pouch stuffed full with his balls doing the same. She could see his balls roiling inside the tight rubber pouch, squeezed one way and then another, their sensitive insides warped and rearranged as the medical device attempted to shake loose every possible sperm inside. He whimpered and drooled behind the gag, but his cock disobeyed his wishes, and his knees turned inwards as the pitch of his whimpers rose, the sleeve speeding up and tightening and twisting until —

"Ggh! MMMMFEGGGHH!"

A gout of white goo squirted into the collection vessel, the lucky subject bucking his hips forward as his orgasm was forcibly pulled out of him. The sleeve milked him mercilessly, speeding up even as his climax seemed to subside, cruelly rubbing against his overstimulated cock until another weak stream of cum dribbled out pathetically, much to his obvious chagrin. Then the sleeve went still.

Olivia turned her attention to the testicular readout. Both balls had gone from a healthy green to a slightly yellowish shade of green, the meter readouts indicating that a significant amount of sperm had been dislodged (unsurprisingly) and (more surprisingly) that his sperm count had been slightly reduced.

"Hm. His fertility's down a little — that's irreversible, right? I think the pouch actually is too small for him."

Cathy squinted and nodded slowly. "Good catch. Looks like we might want to consider actually making a larger line of milkers — the FDA could fine us if they find out especially large guys can get permanently injured from this one." She rolled her eyes. "Ugh, that's going to be expensive."

"You said this wasn't one of the quality control tests we should be breaking balls in, and we're literally killing his balls here, right? So should we stop our test?"

Cathy stared at Olivia for a silent beat. Then she broke into laughter.

"You're hilarious!" Cathy wiped the tears from her eyes when she finished laughing. "Of course we need to make sure this one's working as expected. We can still sell it for like, guys who are large — just not freaks like him."

Olivia smiled. "Okay. Cool! I figured with how you were talking about it, we'd need to be more careful, but to be honest...I'm glad I get to start killing balls right away." Her eyes widened at what she'd just said out loud. "I mean, I'm dedicated to the OverEasy mission, of course, but —"

"But you were most excited about this internship because you knew you'd get to bust an endless series of restrained testicles, and hopefully lower some sperm counts," Cathy finished for her. "Of course. That's perfectly natural; lord knows that's why I started my career here." She winked. "You're a little turned on by castration, aren't you?"

Olivia blushed.

"Relax. If we fired every girl who was a little kinky, we'd have no employees left."

"Y...yeah. Sorry, I'm a little embarrassed about it. But I've always found it so fucking *hot* when a guy loses his balls. I've just never met someone who talks about it so openly."

The subject on the wall let out an agonized wail, his balls flattened as the milker forcibly squeezed another orgasm out of him like toothpaste from a tube.

"Welcome to OverEasy! You'll get used to it. That's the benefit of a company by women, for women, and *of* women. We don't have to hide our natural urges from each other or be embarrassed or ashamed of our kinks. There's a break room down the hall when you take your break. You can do a little unstructured 'quality control' on our line of sex toys, vibrators, and dildos. Trust me, you'll need to blow off steam to keep your head in the game here. Just make sure to clean them off when you're done for the next girl; there's a little sanitization station in there for after you're done cumming your brains out."

"Thanks, that's...really convenient." Olivia blushed, deeply embarrassed but already starting to get wet between her thighs. OverEasy sex toys were *legendary*, and while she had a couple vibrators, she couldn't afford the pricier product lines. She couldn't wait to try them out.

"Mmmmmmmmmfff...MmmfffmffffHNNNNNGGGH!!!"

The male subject's protests were muffled behind his gag. He bucked forward, his eyes rolling back into his head as the sleeve chafed and twisted around his bright-red cockhead. Overstimulated as it was, the milker needed to stroke him extra hard and fast

to force another painful orgasm out of his tortured ballsack. It barely gave him seconds for a refractory period this time, stopping briefly then resuming with even more vigor. In the plastic sack, his balls were a kaleidoscope of colors; dull white where the milker was currently squeezing him pancake-flat, dark blue and purple in places it had stopped squeezing and left him badly bruised, and an unfortunately deep black in a few badly crushed regions. Comparing his balls to the projection, Olivia could see the regions of his balls that would be permanently dead, as well as the healthier regions slowly but surely degrading beneath the pressure of the undersized device.

She casually watched for the entire duration of the test. It seemed to take forever. She counted his orgasms manually before seeing that a helpful display tracked it for her, right beneath the array of numbers showing his sperm count being slowly whittled down.

At twenty orgasms, his begging faded, and he went limp against his restraints. He'd finally accepted the overstimulation and pressure and torture he'd signed up for. Olivia walked up to him and removed his ballgag.

"Okay. Okay. It's okay. I'll live. I just need to...need to finish. This hurts, and it's so sensitive, but I...I can get used to —"

The electrodes hidden in the testicular sleeve whirred to life, and his eyes went wide.

"Oh, I always *love* this part," Cathy said.

ZAP

"AAAAUGH! Why, god *WHY!* MY BALLS....It's frying my fucking BALLS! Turn it off, *please!*"

"Good luck getting used to that!" Olivia quipped. The sleeve went back to squeezing and milking him, harder and faster and even more merciless than before.

"See, the voltage being driven through his nuts is totally random," Cathy explained. "The milker might send a moderately high voltage for a second, then ramp down to a pleasant buzz, then go up to the absolute limits of its safety parameters, all totally at random, and totally non-repeating. Guys tend to get used to the squeezing and the milking at some point but the electrostimulation really keeps them on their toes. That sort of novel sensation — even if it's not exactly *pleasant* — sort of resets all the sensations the milker's already saturated, and lets us go beyond what his body thinks is possible. We can milk semen out of him from deep inside his testicles, even some that's raw or barely formed, in a way that no natural orgasm ever could."

He shrieked in agony.

"It's...a bit of a unique sensation, so I'm told."

"I bet," Olivia replied, staring avariciously at the testicles frying before her. She imagined the current flowing through them, an errant twitch of voltage frying millions of potential children, sperm going belly-up and disintegrating without the dream of a chance of ever reproducing. His sobbing had returned, and while he no longer wasted his breath begging, he babbled an endless stream of pain-soaked sounds, nearly comprehensible but nothing quite forming into words as the electrical shocks through his testicles repeatedly sent him gasping and coughing in pain.

The shocks got louder and louder, growing and fading in intensity more erratically as his orgasm counter slowly but steadily ticked up. Each painful cumshot took marginally longer to extract than the last, and by forty-five, the milker only managed to pull a thin string of greyish white every ten minutes. By fifty, he was finally completely limp. The device went to maximum stimulation in a final attempt to get everything out of his balls, and Olivia watched and listened in glee to the wet crackling of electricity pulsing through his nuts, the sound of nutmeat boiling into sterility nearly loud enough to drown out his screaming. Above his ballsack, the cocksleeve pumped away as hard and fast as it could, but the limp worm inside failed to respond.

His prodigious cock had shrunk up into a tiny macaroni, all vigor finally pulled out of it. Beneath, his formerly impressive ballbag had shrivelled up similarly. No longer taut and pulsing with billions of teeming, living sperm, the orbs were probably a full third smaller in volume than when he came in, and their smooth healthy surface was now pitted with electrical burns and softened divots where the milker had squeezed especially hard.

Olivia read through his chart. His active sperm count was zero, obviously; the milker hadn't left him a single living swimmer. His predicted sperm count looked to be about 50% of what he had when he entered; the device had certainly done extensive damage, but he'd have no particular difficulty reproducing. And his hormones appeared to be completely unchanged; she hadn't lowered his testosterone a drop. Olivia tried to keep her demeanor professional over her disappointment.

Anyway, there were still so many other tests to go through, and she'd been lucky enough that she'd got to see a guy lose half his sperm count to a test that should've been completely non-damaging.

"Alright! Great first test, Olivia. Looks like our lucky guy is finally tapped out."

"Thank...thank God. Jesus Christ, my fucking *balls*. And my dick. That thing...that thing is *horrific*. That's torture. I'd rather die than go through that. How...how is that *legal*?!" He bawled.

"It's just a seminal milking, sir. Hospitals all around the world perform thousands of these a day. I'm sorry you're not accustomed to the feeling, but we're medical professionals here, and trust us, there's nothing wrong with the product. Admittedly, your testicles were a bit too large for this model, but that's really an issue with *you*, not the milker," Cathy informed him smugly.

"Now Olivia, just unclip the milker and detach it from him, and we can move on to our next test."

"Sure thing!" She reached around the ring at the base of his dick and attempted to unlatch it.

"Um, it's not opening."

"Hm. The milker should automatically release the ring when it detects he's emptied. There's not really anything to unlatch." Cathy frowned.

"Please...please just get this thing off me and let me go home," the subject begged them weakly.

"Sir, please remain silent. Okay, I've seen this happen before. This is super annoying" Cathy sighed.

"We recently changed suppliers on our testicular rings to cut costs, and the new supplier uses much cheaper sensors to detect when they're supposed to release. About one in a thousand are fully defective, like this, and the milker will never release. Looks like we got one of the duds."

"Oh. So, we just let him take it home?"

"Olivia, that is a two hundred and fifty thousand dollar piece of medical equipment."

"Right. So..."

"So we have to get it off of him."

"How?" asked Olivia.

"Yeah, how...Oh no. No no *no*," he whispered, visibly distressed by the answer all three of them had converged on.

"Ah." Olivia looked up at Cathy, who nodded her approval, then turned to the drained pair of gonads trapped before her.

"Sorry, sir," Olivia said, not bothering to hide her grin. "I'm going to need to pull it off you."

"That...How would that work? How *can* that work?" He said, in growing horror.

"Well, I'll have to remove each of your testicles from their pouch, then sort of...squeeze them through the ring. I know it's a tight fit, but there's a bit of a gap between the hard plastic and your penis, and with your balls shrunken down and your dick mostly flaccid, I think it'll work."

He stared down at the base of his dick. Despite their abuse, his balls were still at least the size of chicken eggs, and the tiny gap between the plastic ring and his cock was barely a centimeter wide.

"No. No, no no. It...they can't fit. No way can they fit."

"Relax. Gonads are more malleable than you think. I'll get this off you and send you on your way in no time," Olivia said sweetly.

"NO!" But she ignored him. Grabbing his slightly smaller right ball, Olivia rotated it around, lining up the thinnest part of his gonad, the top, with the ring at the base of his dick. Then she set both of her thumbs against the other side and began to push.

At first, she made no progress, the testicle unwilling to yield its shape to slip through the gap. Biting her lip and squinting, Olivia pressed both thumbs into the bottom of the thing as hard as she could. She was rewarded with earsplitting screeches from him and a sickeningly wet *crunch* from his testicle, and finally, a bubble of shiny taut nutflesh appeared on the other side of the ring. Encouraged, she continued pressing in hard, feeling the internals of his babymaker warping beneath her fingers. She imagined the tightly-wound squiggles of nutmeat between her fingers, loosening and shifting and rearranging until they could fit through the tiny gap and squirt out the other side. The readout on the screen confirmed his sperm count was still dropping precipitously.

Minutes passed as chunk after agonizing chunk of nutmeat squirted through the gap, until finally, she was halfway through. The plastic ring was cinched tightly halfway down his nut, distorting the former oval into a pinched hourglass shape. Olivia removed one hand from the trapped half of his nut and grabbed the much softer region that had made it past the ring. Pinching the sensitive bubble of loosened nutflesh, she began to *pull*.

*"AAAAIIIIII! NOT THE OTHER HALF, PLEASE STOP PINCHING STOP STOP STOP IT'S TOO SENSITIVE! OH GOD! FUCKING JESUS **CHRIST** HOW CAN ANYTHING HURT THIS MUCH?!"*

"Please, sir, we're almost there. Take a deep breath and calm down, it's just a little pain."
And a much lower sperm count, Olivia thought to herself, grinning.

She could tell there was a sort of density gradient on each of the two sides. The trapped half of his ball was still fairly solid feeling, but after it had passed through the milker's harness, it felt much mushier, its texture closer to soft taffy than healthy testicle. The readout on the projection confirmed her intuition: being extruded through a gap a tenth of its width was doing no favors to his fertility. He wouldn't be completely sterile when she was finished, but he'd be making a fraction of the swimmers he used to. She savored the feeling of sperm ducts twisting around and epididymal walls giving way as she finished freeing half of his manhood from the faulty device, pushing and pulling it apart from both directions.

Finally, his right ball hung entirely outside the silicone pouch, liberated at last. The man's breathing was shallow and hitched, his eyelids fluttering as he skated on the brink of a nutpain-induced coma.

"There we go! The big guy is free at last! Although, he's not quite as big as he used to be." She wiggled the freed ball around beneath him. It jiggled like a loosely filled water balloon, its volume clearly less than a half of what it had been, and he groaned in pain at the minuscule stimulation. The chart on the wall showed his OETF down to 37.5%. Olivia figured that meant his freed right ball was down to a quarter of its potential, and his still-trapped left one was only half-dead. By the time she was done extruding it too, he'd probably only have a quarter of his manhood left. The thought made her drench her pantyhose.

"Now, for the left ball."

"Please...I can't take any more." He was trembling in fear. "My left one is bigger. I...I don't think it'll fit."

"Sir, it's fine. The size difference between your testicles is minimal. I'm sure I'll be able to work it through with a bit of elbow grease. Just try to think of something else to get through the pain, okay?"

"Something else." He said dully.

"Yeah. Think of something pleasant, or complicated, or just...I don't know, anything. A movie you saw recently, maybe. It's just a bit of pain. You really can get over it if you try a bit harder."

"A bit of pain." He repeated.

"Yeah." Olivia swallowed, then shrugged. "I mean...I guess. I don't know what it feels like. I just have to do my job, and my job is taking your milker off. So, let's get to it."

She gripped his slightly larger left ball. Twisting it around again, lining it up with the gap, she repeated her previous procedure. Pressing in hard, her thumbs sank into the bottom of his nut, but even with all of her weight pressing down the thing wouldn't budge.

"STOP!" He shook his body, uselessly trying to get her off his trapped, healthier nut.

"I promise, sir, this will all be over soon." She redoubled her efforts, and her thumbs sank deeply into his ball. She felt the promising *crunches* beneath, his testicular matter rearranging itself haphazardly against her fingers, but his ball still stubbornly refused to go through the gap, even as it gave way beneath, her thumb dimpling his drained-dry nut. Pressing harder and harder, his ball gradually yielded and softened beneath her pressure but refused to squirt through the gap.

He stared gape-jawed at the diagram of his balls, watching the OETF meter slowly creep down as the red splotches across his left ball spread and spread, healthy green giving way to warning yellow, yellow giving way to red, and still Olivia pressed in, deeper and harder and *stronger*, her toned arms quivering with effort, beads of sweat clouding her vision, so sure that the tiny difference in size between the two balls didn't matter, if his right fit through his left should too, she just needed to squash it until it was flat enough to —

All at once, his left ball shot through the gap.

Pop

...And emerged on the other side in pieces, the backside of his nut's shell blasting apart as it finally gave up and expelled its innards in a clump of limp mush. Fully separated from each other, his nutshell and ballmeat formed two separate discrete chunks, splurting through the gap and pooling limply together at the bottom of his scrotum. The larger chunk, made up of the ultra sensitive, important tangle of cords and ductules that had

previously made up the internals of his gonad, held their spherical shape for an instant before untangling into formlessness. His OETF abruptly dropped down from 37.5% to 12.5%.

"Oh. Oops."

He stared at the diagram for a beat, the image of his left ball now entirely black. Errors and klaxons cluttered up the display, helpfully informing him that he'd just experienced a catastrophic testicular rupture.

Then the pain finished travelling up his nerve endings, and his brain made sense of the inhumanly high signals radiating from his crotch, and he shrieked.

"MY BALL! YOU POPPED MY *BALL!*" Turning his head to the side, he dry-heaved, before resuming his shrieks. "Oh god, it's mush, it's fucking *mush!* WHAT DID YOU DO?!"

"Yeah..." Olivia said awkwardly. "Sorry about that. We can try to get you to the hospital, but I really don't think there's enough left to sew up."

"Ah." Cathy joined Olivia in front of the man, using her pen to roll his ballsack around and inspect its contents, poking and further untangling the slippery mush that had been half of his manhood. "Yeah, that's a total rupture."

"STOP...STOP *POKING IT!*" He coughed and gagged, as if he was physically choking on his balls, then his eyes rolled back into his head and he finally passed out. As much as Olivia loved hearing his shrieks of pain, the talking was starting to get truly annoying.

"Yeah. I'm sorry, I just —"

"No, it's fine. The waiver he signed absolved us of all culpability, and gives us complete rights to any testicular or penile injuries, removals, or destructions necessary to carry out our quality control process. I'm just noting it for the record. These things happen. And frankly, I didn't see another way to get the device off him without damaging it."

"Couldn't we just have snapped the ring off and replaced it without breaking the whole device? You said they were pretty cheap, right?"

"That's not our usual protocol."

"It would've saved his testicle though, right?"

"Olivia, look. The point is, you did your job just fine. The milker operated well within expected parameters. We'll just need to tell our sales reps to remind customers not to overstuff the device with statistically anomalous testicles. Besides that, this test went off without a hitch."

Cathy's pen probed further into the mush-filled ballsack in front of her face, sliding into the hole in his busted nutshell and poking against the tattered remains of his left epididymis. Its owner groaned and stirred awake, forcibly pulled from the painlessness of sleep back to the cruel real world with his real ruptured testicle. He sobbed quietly as Cathy twirled her pen around, thoughtlessly grinding it against the inside of his emaciated testicle.

"Now that our test is done, we can debrief our subject. Pay attention to how I do it; I'll let you do the next one," Cathy smiled. "And, as hot as this is, OverEasy does need you to stay professional until your break. Olivia."

Olivia realized her hand had crept beneath her waistband without her even noticing. Mortified, she yanked it away, gasping in denial as her fingers left her clit. Cathy turned to face the man.

"So, you're finished with your milker test. As I'm sure you're aware, your left testicle did undergo an irreversible rupture. I'm not technically a doctor, but I've seen my fair share of testicular injuries, and I just want to give you a heads up — it is going to have to be removed."

She maintained eye contact with him. Olivia thought it was a stupidly obvious thing to say, but she could tell from the light leaving his eyes he'd still been hoping to salvage it. She tried to capture a mental photograph of that exact instant, an expression of total defeat settling on his tear-soaked face. She'd emptied her fair share of scrotums with her trusty self-defense weapons, but she never got to stick around and really see the effects of their testicular ruptures on her attackers. Getting to watch a guy have to deal with the aftermath and go through the total mental anguish that came with the destruction of his body, his sexuality, and the core of his male identity all at once was so exquisitely deliciously erotic. Olivia bit her lip as wetness seeped down her thighs.

"Your right testicle is down to about a quarter of its fertility and hormonal capacity, but it still technically works. You should be able to father children, eventually. Although you'll be shooting blanks for at least a month after a milking that thorough."

"Thank...thank God." His voice was hoarse and high-pitched. Rivulets of cold sweat coursed down his sculpted six-pack, dripping off his limp cock and lopsided ballsack.

"Hopefully your next test is a little easier on your last gonad."

He blinked in confusion.

"Next...test?"

"Yeah. If you remember your contract, you signed over *both* your testicles in the waiver, and OverEasy reserves the right to continue testing you as long as you're able to fill part of that bargain," Cathy explained helpfully.

"But...you said. You said I was done. I don't...I can't make any more cum. You took it all. Before you'd even popped my nut, it...you *drained* me."

"I said the *milker* test was done. You're right, obviously we can't milk anything more out of you now; this girl sucked every drop of fertility you had to give us right out you! But there's tons of other quality control labs in this building alone! Let me see if any of those girls need you." Cathy tapped away at the control pad until it lit up green and chimed a confirmation sound.

"Yup! Looks like Home Goods can use you. They've got this new line of kitchen gadgets — garlic presses, citrus reamers, egg slicers, that sort of thing — they're looking to test out. And they've only tested on full ballsacks so far. They really need to see how the products perform with a half-man like you, and they don't need you to have any sperm left in your ball for their tests."

Cathy pretended to wince in sympathy, but Olivia could see her grinning. "Oof. Looks like it's mostly about seeing how the products hold up in comparison to your last gonad's structural integrity. If you really wanted to have kids, well...best of luck up there!"

"*WHAT?! NO!*" He shrieked. But Cathy just pressed a button, and the motors on the wheels of his frame whirred to life. He rolled along the rails behind, still tightly tied to the frame, shrieking with each mechanical jolt of his shattered ball.

"Okay! That went really well. On to our next test!" Cathy said cheerily.

Chapter 2: BoySnapper™ Scrotal Stretcher

Elliot shivered in his harness, the cool breeze from the air conditioner above chilling his naked thighs. He was anxious, and uncomfortable, and a little nervous about whatever this “test” would be. His balls were bunched up between his legs even tighter than usual, his already unusually small scrotum now wrinkled hard and barely the size of an apricot pit.

Maybe this was a bad idea. The payout promised in the pamphlet was drool-inducing, but the whole signup process had been weirdly rushed. He had a bad feeling when the female lab techs had instructed him to get fully naked and secured to the X-frame, but he was too embarrassed to back out at that point. Maybe he should alert someone and cancel —

KER-CHUNK.

No time to change his mind now, apparently. The floor opened up beneath him and his frame jolted to life, rolling him swiftly through a dark passage like some kind of bizarre roller coaster. He gasped as he zigged and zagged through the internals of the building, the darkness and long, jolting journey stealing any sense of space and time until he came through the ceiling of a brightly lit laboratory of some kind.

And right in front of him, standing six inches from his shrivelled ballsack and turtled, uncut dick, was a woman in a lab coat who looked very familiar.

No. It couldn't be... It *can't* be. Of all the lab techs to test him. Of all the girls in the world. It had to be this one.

Olivia. *His* Olivia.

At least, that's how he thought of her when his roommate was gone, and he was naked in his bed, pumping away furiously at his diamond-hard cock. Or when he stroked a load out in the shower. Or when he tried to hold back from touching himself for a few days and woke up in the middle of the night, gasping her name, his cock merrily unleashing his spunk into his pajamas after a particularly vivid dream starring the lithe Asian beauty.

The goddess that occupied his waking thoughts and most of his dreams was now eye level with his dick, and close enough he could feel her breath on it. Her eyes flicked up to meet his, and a dick-shriveling smile grew across her face. He shivered in the breeze.

“Elliot? Elliot Ludnick?! I had no idea you were a test subject here!”

"I...um." He coughed. In real life, this close to his naked body, her bright eyes and adorable smile were even more alluring. The top button of her white blouse was undone, a sliver of porcelain white cleavage peeking through.

"How are you? What are you doing here?"

"I'm uh. A test subject." She giggled, her laughter like humiliating music to his ears.

He wanted to die. He wanted to get dressed. He wanted her to keep looking at him and laughing at him and acknowledging his existence.

She had said his *name*. First and last. He hadn't known she noticed his existence. This was the best day of his life, and the worst, and the most exciting and humiliating all at once. His mind was a whirl of emotions.

"I can see that, obviously! I mean why though? Did you really need the money?"

"Uh. Yeah. Student loans are rough," he babbled.

Great. Now, not only did his crush know he had a small dick, she knew he was broke.

"Aww. I'm sorry to hear that. My daddy covers all of my tuition, but I've heard loans can be rough. Good thing OverEasy is here to help you out, right?"

"Yeah. Good thing. I'm really lucky, I guess."

"That's right, you are!" She was now definitely looking right at his cock and balls. "Lucky in one way, at least."

Was she making fun of his dick? He wanted to shrivel up and die. Between his legs, his scrotum obliged, his balls shrinking even further until they nearly retreated into the holes they'd dropped out of during puberty. In contrast, his penis started to unfurl, slowly but surely, to his great horror. He couldn't decide if being shrunken and small or quivering and hard in front of her was more mortifying, but he had little choice in the matter anyway.

"Ooh. Little guy's starting to wake up." She laughed again.

"Please...I'm sorry, I..."

"It's fine, Elliot. Honestly, it's cute."

She smiled up at him.

"I've always thought you were kind of cute, and your dick matches your personality perfectly."

His mind went blank at the words. His dick was now fully hard and twitching before her. Olivia, *his Olivia*, had called him *cute*. The subtle implication that his dick was small didn't even sting too badly.

"Remember, Olivia. You're an OverEasy employee, and this is your subject. Be professional, please."

Elliot hadn't even noticed the older woman behind his goddess. She was also smiling down while staring between his legs, but somehow he could tell she was looking an inch lower, at his balls. At least, what little there was to stare at there.

"Of course, Cathy. Sorry Elliot, we have to get to work." She flicked the tip of his twitching glans playfully, eliciting a strained yelp as he tried to process the sensation of the first girl in his life touching his dick. Then she opened up the cylinder in the pneumatic tube next to him and pulled out an unfamiliar contraption.

It was a squat, industrial-looking thing, only a few inches across but apparently heavy from how Olivia hefted it, built from two thick metal plates pressed flat against one another. Heavy bolts and guide rods ran along the edges, holding the plates together, and a few lights on the side blinked slowly. At the center of each plate was a circular iris made of interlocking metal segments.

"What is that?" he asked.

"It's..." Olivia squinted at the instructions before her. "A 'BoySnapper™' scrotal stretcher, apparently. Hm, weird name. Not sure what it's for..."

"It's a sex toy for men," Cathy explained. "Testicles are already enormously sensitive, but stretching their balls away from their body can apparently induce a lot of very interesting sensations. And frankly, it can be quite a bit of fun for the woman as well," she purred. "Trust me. I've got a whole array of BoySnappers in my toy drawer. This one will be exciting."

"Cool!" said Olivia.

"You're going to put that thing on my balls?" Elliot squeaked.

"I'm going to follow my test procedure, is what I'm going to do, Elliot. Please don't interrupt." Olivia scanned down the sheet of instructions. "But yeah, I'll be putting this on your scrotum."

"Um. Okay." He didn't know what to say. But he started to notice peculiar...wet spots on her blouse. And white smudges beneath, on the floor. And his erection grew harder as he reached the obvious conclusion.

This was some sort of...sex game. Sex company. Whatever it was, Olivia had just made her last 'test subject' cum.

And he was next.

Whatever the game was, he was interested. Very interested. All thoughts of begging to be let go vanished from his mind.

"Is that okay, Elliot?"

Is it okay if I jerk you off, Elliot? Okay if I make you spurt all over my tits, and my face, and then I bend over and lift up my little black skirt and spread my legs apart and slide your rock-hard dick into my pussy? Is it okay if I take your virginity, Elliot? Is that okay?

"YES!"

She flinched in surprise, unable to hear the internal fantasies he was responding to.

"Good! Glad to hear you're so enthusiastic. Let's begin." She read the first instruction closely.

"To start with, I will need to...let's see here...punch you in the balls, full force. Upwards."

"What—OOF."

In the blink of an eye, Olivia had done the splits on the floor and uppercut him right in the testicles, her bare knuckles crushing his tiny orbs flat. Now, he felt them actually go fully inside him, slipping through the two gaps that were just a bit too small. He choked in pain, and his dick wilted back to its meager flaccid length.

"Olivia, *why?!'*"

"Sorry, Elliot. It's the test procedure, apparently." Her cheery tone didn't sound sorry.

She pulled her fist down and slammed it up into his goolies again. And again. Each hit was excruciating. Elliot had never taken a blow to the groin before, although he'd seen how his friends acted when a football or pointed heel got them in the nuts, and he finally

understood why they rolled around on the floor, clutching their nuts pointlessly. But strapped down as he was, he couldn't react or move or protect himself at all. He just wailed in choking pain as his crush crushed his nuts.

"Okay. Ten solid hits. Looks like we're ready to begin!"

"Begin? Olivia, it hurts so much, I...I can't take any more."

"That was just the warm-up, silly! We need to get your balls to a baseline level of sensation before we begin testing the product. To confirm, that did hurt, right? Instructions say that should've hurt you."

"Yes, Olivia, getting uppercut in my naked balls ten times fucking *hurts*."

"Great. Now to slide this onto your balls..." She frowned. "Um. Elliot. Where *are* your balls?"

"You punched them up inside of him, dear," Cathy said. "It's an easy mistake to make with testicles this small. Just reach your fingers into the cavities behind his scrotum and pull them out."

"Got it!" Olivia jabbed her fingers upwards into his empty ballsack, pressing hard until she wedged them into the tiny holes his nuts were trapped in. He could feel her fingers wiggling against his balls as she did her best to fish them out of their hidey holes. Each subtle movement pressed his nuts against the cavity they were trapped in, but finally she got her fingers hooked behind the little organs and *yanked*, eliciting a squeal of pain from him. The organs landed in the bottom of his nutsack with a soft plop, hanging slightly lower than before. She gave them a firm tug, stretching them to the limits of his extra short nutcords and earning another squeal of pain.

"Olivia! Don't pull so hard! You're stretching them out..."

"Oh Elliot. According to these testing instructions, we're going to need to stretch you out a *lot* more than that." She brought the toy up to his ballsack and began pressing his nuts through the holes.

"Ah...Careful. Don't squeeze them too hard, please."

"You're fine, Elliot. This is not a tight fit at all." She snorted, his scrotum barely touching the sides as she manipulated it through the two holes in the plates. "If you want to see a tight fit, you should've seen my *last* test subject." Elliot had no idea what that meant.

She finished pulling and pushing his balls through the two plates. Elliot could see his balls pressed tautly against the thin skin of his scrotum, their flesh turned white and veins pulsing against the surface of his gonads. The pressure was uncomfortable, and having them stretched heightened the nutpain she'd already put him through. He could practically feel his balls bruising and purpling from her punches, each throb of his heartbeat outlining the more painful parts of his balls.

"There! Now let's just get the app connected..." She fiddled with something on her phone. "And...there. Now to adjust the fit."

She tapped a button, and the iris around the neck of his nutcords contracted with a gentle whirl. His balls were now completely trapped.

"Perfect."

"I thought he'd be too small," Cathy quipped.

"Now, let's begin." Olivia let go of his balls, and Elliot could feel the heavy device pulling his gonads down farther than they ever had, the weight stretching his scrotum unnaturally long. She tapped a button on the open app on her phone, and an electronic motor whirred to life between his legs.

And suddenly, the two plates no longer touched. There was a hairline gap between them, and it was slowly growing with each mechanical whirl, stretching his balls farther and farther from his body.

"Um...Olivia?!" He said shakily.

"Yes?"

"It's...stretching my nuts out."

"Yes, Elliot. It's a ball stretcher." She enunciated each word clearly, like she thought he was a bit dim.

"Oh, um." He didn't know what to say. He didn't know why anyone would want something like this done to them, but the name seemed obvious enough.

"The instructions are very clear on how to test it. I'm just doing my job here." She tapped a button again and it stopped expanding. His nuts now dangled a full inch farther than they did naturally, trapped against the bottom of his scrotum by the strange inverse clamp on them.

"Now, I'm going to repeat the first step, and you'll tell me how the sensations have changed."

"You're going to punch me in the nads again? Hold up, can we just —"

CRUNCH.

Her uppercut caught him off-center, pinning his left nut alone against the stainless steel plate with the entire force of her punch. Elliot gagged. He felt like his balls were in his throat, and he stupidly looked between his legs to make sure she hadn't punched them back up inside of him. But of course the BoySnapper made that impossible.

"Olivia, please —"

She slid down between his legs and lined her fist up with his ballsack yet again.

WHUMP-CRUNCH. WHUMP-CRUNCH.

Her ball punches hurt even worse than before, and Elliot screamed and shook, his body involuntarily trying to protect whatever was left of his fertility. But the ties binding him to the frame behind were secured well.

"Hold still, Elliot. I'm trying to work here."

WHUMP-CRUNCH. WHUMP-CRUNCH.

WHUMP-CRUNCH. WHUMP-CRUNCH.

WHUMP-CRUNCH. WHUMP-CRUNCH.

WHUMP-CRUNCH. WHUMP-CRUNCH.

"Whew!" She wiped the sweat off her forehead, inspecting her work. Every semen-shattering punch had been aimed at precisely the same spot on his scrotum, and a fist-shaped bruise was starting to bloom.

"There. How did that feel?"

"Unnnnghhh....*Fuck*, my balls."

"Elliot? Did that feel different? More intense, or less intense than the first time?"

He nodded.

"More intense? Like, more sensation, more pain, more of those nerves snapping — oh! I just got the name."

"Yes. Yes, it hurt way more. With the way my nuts are stretched away from me, it's like every little feeling is amplified, and when you punch me in the balls...it's so bad. I think I felt something crunch inside the left one, too, and I'm really worried...God, it's so bad, Olivia. Please, are we done yet?"

"Not quite yet!" More taps on her tablet. More whirring. Elliot gritted his teeth as he felt his nutcords pulled even tighter, the top of his balls now nearly three inches away from where they were usually moored.

"Perfect. Next sensation test."

"Please...I can't —"

WHUMP-CRUNCH. WHUMP-CRUNCH.

WHUMP-CRUNCH. WHUMP-CRUNCH.

WHUMP-CRUNCH. WHUMP-CRUNCH.

WHUMP-CRUNCH. WHUMP-CRUNCH.

WHUMP-CRUNCH. WHUMP-CRUNCH.

Ten more brutal punches stole the breath from him.

"Elliot? How was that?"

His head lolled to the side. He could barely form thoughts, let alone words. His balls felt like a piñata.

"It...it hurt more," he said, his voice high-pitched and wheezing.

"More than last time? Or more than the first?"

"Both. More than anything. I've never felt this much pain in my life..."

"Great! The stretcher's working just as expected. Next stretch!"

"No...please..."

This time, the whirring was higher pitched, and he could feel the tiny motor in the device straining to stretch his nutcords even further. Beneath the whirr, he heard a very worrying *cracking* sound, like a stiff rubber band being pulled beyond its tolerance.

"Olivia, something's wrong. I think...I think they're tearing..."

"Hm." She hooked a finger behind his taut nutcords and twanged them like a guitar string. "Nope, they still seem intact to me. I know it's uncomfortable, but I promise, these little cords have a lot more give than you boys think! Let's take you down another inch, just to be sure."

"NO!" But she ignored him, and another tap set the device whirring again, vibrating and screeching as its motor struggled to find any more give in the taut cords it dangled on.

"Theeeeere we go. Some guys hang low and loose, but you really kept your balls tight up against you, didn't you? Although I think they'll be hanging a little lower from now on..." Elliot looked down, shaking with fear at what he would see. The sight between his legs was almost unrecognizable.

His balls must've been a full seven or eight inches from his body. The two tiny orbs at the end of the metal ball stretcher were paper-white, covered in a map of throbbing blue veins. His ballcords looked to be stretched as taut as tennis racket strings, and every wrinkle in his scrotum had been completely flattened and smoothed under the pressure. She gently stroked his inner thigh, and he felt his balls tense up even more, his body involuntarily attempting to pull his nuts through the iris that was now much too small for them. With his nuts stretched to their limits, even that tiny increase in tension was agonizing. White-hot fiery pain shot through his tender nut cords and the sensitive tangle on the back of his balls.

"AAAAAAIIIIIIAIAIIIIIGGGH!!"

"Your cremaster reflex seems intact. Now let's test the rest of your nerves."

"No, please God no more..."

Then she punched him in the nuts again, and words left him entirely. His body convulsed as each of her ten punches flattened his tiny trapped balls against the unforgiving metal behind them, and waves of darkness contracted his vision to a point. The harsh overhead lights faded away as he drifted off into a sea of agony.

Nutpain melted his reality, the harsh lights and sterile whiteness of the lab fading like a forgotten dream. He was no longer in a lab. Now he was at the bottom of a deep, dark well. Somewhere up above, a tinny voice said something, its query echoing down the walls.

"How was that, Elliot?"

Back in the real world, his eyes were rolled up into his head. Drool tracked his cheek as he made inhuman noises. Olivia squinted her eyes and cocked her head, trying to make the words out. But finally, he managed a vaguely affirmative moan, and she beamed.

"Perfect!"

"Guuuuhhh..."

"I know, it doesn't feel too great. But you're doing fantastic, Elliot."

"No moo....nomoplee....ika...icant..."

Olivia looked down at her tablet, then at the instructions.

"Good news, we're done with the stretching."

"Buhhgguhhl..."

"Yes, and with the ball punching too."

"Thnnkkkdag. Dah."

"You're welcome. Just one last part now. And I think you'll really like this one." She opened a drawer and pulled out a pair of latex gloves.

"Olivia, what are you doing?" Cathy asked, frowning.

"I'm still following the instructions, just...improvising a bit. Trying to be a self-starter, like you said!"

Cathy narrowed her eyes. "This...isn't standard."

"Trust me. I've got an idea." She turned back to face Elliot. Her eyes were wide, and her smile was kind. He looked down at her, and the vision almost made the agony worth it. Almost.

"Elliot, with your permission — I'd like to induce an orgasm."

At that, he managed to find his words.

"Induce...an..."

"I'd like to jerk you off. Just that one last little thing, and our test is over."

Elliot's pupils dilated, and reality sharpened into focus again. He nodded fervently. Each movement made his balls wobble back and forth, stretched out at the end of the toy, but he barely even noticed the pain. He just stared wide-eyed as she began to lube up her hands and reached for his twitching dick. She seemed to move in slow motion as she got closer and closer...

And finally made contact. Even the feeling of her rubber-clad hands on his cock head sent shivers of electricity up his spine. Through all of the mind-shattering agony his crush had just put him through, now she was jerking him off. At first, his modest length was only just long enough for her to fit one hand around, but he quickly grew to his full five inches, his virginal pink cockhead just barely peeking out between her gloved thumb and forefinger.

"Ooh, you're a bit of a grower, aren't you?" She brought her other hand to his cock. His shaft wasn't quite long enough for her to hold it in both hands, so she used her second hand to polish his cockhead, rubbing lube into it and stimulating it mercilessly. He twitched and groaned at the overstimulation, further lubricating her hand with spurts of precum.

"Heh. You're a virgin, right? Like, a total virgin? You've never even been touched by a girl?" He couldn't answer, overwhelmed and gasping from pain and pleasure as he was, but the question appeared rhetorical.

"I can always tell. You first-timers are always so twitchy and excited. It's honestly adorable. You're so cute, Elliot."

"My balls...they're so *tight*..." He shuddered, her merciless hands gripping and rubbing him even as the cruel harness on his testicles stretched them well past their natural limits.

"I know, the stretching is pretty rough. But you can handle it for me, right? You can handle your delicate little goolies being stretched as far as they possibly can? You can still cum through that feeling, right? I need you to cum, Elliot."

"I...don't know if I can...Olivia, please..." Her stroking sped up. She had pulled back his foreskin enough to expose his ultra-sensitive glans. Her left hand worked his shaft, faster and faster, while her right hand polished his cockhead mercilessly.

"And, even more than that, I *want* you to cum, Elliot. It's not quite part of the test, but I just...honestly, I just love taking a nervous little virgin's handjob virginity. Even if it's in a corporate quality control lab, and your nutcords are being stretched to the brink of their limits, and I just punched you in your babymakers a few dozen times — I still want to make you feel good. Can you feel good for me, Elliot?"

Warmth suffused his body. He bucked forward, his back arching against the X-frame.

"Oh god...*OLIVIA! I'm gonna...I'm gonna cum!*"

"Yep, you sure are." Through his ecstasy, Elliot didn't hear her voice abruptly shift from a sympathetic coo to smug gloating.

"*AAAAHHHH!*"

His orgasm hit finally. His eyes rolled back into his head as he felt the greatest pleasure of his life course through him, up his balls through his stretched-tight cords, his body drawing the organs up against him even harder as he started to cum, one great ribbon of white following another. And his ballcords tightened even *more*, against the unyielding heavy steel BoySnapper, and —

SNAP.

Burning pain shot up the left side of his ballcords. The gunshot snap had originated from *inside* him, somehow, and as he looked down in horror, he watched his cumshot continue before his eyes, his body futilely attempting to tense his nuts up even harder —

"Oh. Now I *actually* get its name." The pain in his ballsack was so great, he could barely hear her. Olivia's voice sounded like she was at the opposite end of a very long tunnel.

SNAPSNAPSNAPSNAPSNAP

A series of horrible sounds rang out from his ballsack, each staccato *SNAP* accompanied by stomach-churning nutpain. As agonizing as her punches had been, whatever was happening in his scrotum now was a completely different level of pain. Not just in intensity, but in quality. Some alien sensation he couldn't identify, agonizing burning and snapping and *tearing* —

And between his legs, Olivia was grinning as he unloaded more and more cum, semen splattering against her face and dripping onto her blouse, more than he'd ever produced in his life, an almost unnaturally sized cumshot. It must be from the stimulation, he told himself deliriously, the softness of her hands and the sight of her tits and her scent, and he bucked and gasped as his orgasm intensified, his balls pulling up even harder, the left side dangling loosely but the right side still taut, until another surge of pleasure pulled his balls up harder, again...

SNAP

And a second horrible pain shot through him, a desperate sense of *loss* spreading through him as he tried to make sense of the burning itching agony spreading to the right side of his balls now. He watched in horror as his cumshot abruptly changed, still spurting onto the perfect, beautiful love of his life, its healthy milky opaqueness replaced with total translucency...

And Olivia took one hand off his shaft (leaving the other to continue polishing his head cruelly) and reached below, grabbing his balls.

And to his horror, through both the bucking ecstasy and teeth-clenching pain, he realized he felt nothing when her hand made contact with his sack. His dick was still twitching and splurting something watery with gusto, and his ballcords were a fiery jumble of agony, but his most sensitive, private parts were completely numb.

He dumbly watched her manipulate his testicles in her hand, spinning them once, twice, thrice, over and over, twisting and turning them...

And no matter how many times she spun them around, they didn't get tighter, their cords failing to tangle into each other. And he still felt nothing, absolutely nothing, because he realized she had just snapped —

He finally passed out.

Olivia wiped her brow, almost retching at the slimy feeling of eunuch cum. She could almost feel Little Dick Ludnick's little swimmers wriggling their way down her face and breasts, and she had a sudden primal urge to wipe them out before one could, against all odds, slither its way inside her. Projected on the wall behind her, the two images of his testicles flashed on and off. All around, alert icons blinked yellow and black, alerting her to some kind of disconnection in the system.

"TESTICULAR CIRCULATION NO LONGER DETECTED. PLEASE REATTACH THE ELECTRODES FOR ACCURATE DATA COLLECTION AND CONTINUE TESTING ONCE COMPLETE."

The image of each ball was blanked out, a question mark inside where the heat map reading should have been. All other readings displayed dashes or N/A or some other indication that they were receiving no viable data.

"It's not the electrodes he needs reconnected," Olivia smiled, then frowned at the mess of cum still adorning her.

"Ugh. Guys always spurt so much when they get neutered." She rifled through the drawers until she found an industrial box of OverEasy bleach wipes. Then she set to work cleaning herself thoroughly, extinguishing every drop of fertility glazing her forearms, face and tits, even making sure to get the sodden patches soaking through her blouse.

"I don't believe that was in the testing procedure," Cathy said icily. "We need to have a discussion about your performance, Olivia."

"But it was, Cathy. Look!" Finally finished destroying the small-dicked loser's legacy, she wadded the wipes into a ball, then carefully peeled her gloves off so she didn't touch their sodden surface. She tossed the handful of garbage into the receptacle below, then picked up the testing instructions and pointed out the last line to Cathy.

"That says to continue tapping the button on the app until the stretcher snaps his ballcords. It does *not* say to give him a final loving handjob."

"But the app wasn't working!" Olivia showed her the tablet. The green "STRETCH" button was greyed out, an error message above it stating that the stretcher had reached some sort of internal error and couldn't operate any longer.

"And the instructions explicitly said I needed to snap his ballcords! When the stretcher stopped working, I needed a way to complete the test anyway. I figured his body's natural reaction to pull his balls up during an orgasm would be enough tension to finish them off, and it looks like I was right."

Cathy was silent for a beat. Then she shrugged.

"Well, we generally avoid giving out actually pleasurable orgasms to test subjects when we can. And technically, you just needed to mark the product as defective to finish the test. But I have to applaud your creativity, and we do like to encourage resourcefulness and thinking outside the box at OverEasy. So, well done, young lady."

"Thanks. And yeah, sorry about actually letting him get off. It's not the way I would've preferred but I *really* wanted to make sure I actually castrated him."

"Fair enough. I thought you were going easy on him. You seemed so...familiar. Friendly, even."

"Friendly with Little Dick Ludnick?!" She laughed. "Sorry, that's what me and my friends call him behind his back. He's so gross, and he's super obviously been obsessed with me since freshman year. Every class, I catch him staring at my tits, or my ass, or sometimes just my belly or feet or whatever, like literally any skin I expose — it's super gross. He's such a loser."

"Ah," Cathy said, relieved. "You were faking it then."

"Hell yeah. I almost wanted to throw up when I felt his little dick in my hand. I just wanted to fuck with him before yanking him out of the gene pool."

"Well, more points for acting then, too. Quite impressive, really. This doesn't come up too much in quality control, but in Research and Development, we often have to trick or mislead our male subjects for some of the psychological and game theory tests. You might really be a better fit up there."

"Really?!"

"Yeah. Someday. Once you put in the work down here. For now, on to the next test. Debrief the subject and see if he's eligible for further testing."

Olivia walked over to Elliot's limp form. She widened the iris around his balls and tugged the device off, the shrunken, detached glands passing easily through the two holes. Even with the ball stretcher removed, his scrotum didn't return to its previous tightness; his balls hung down well past his knees, rolling around disconnected and loose in the bottom of his sack. She reached between his legs and dug around in his sack until she found the frayed ends of his nutcords that were still attached to him. Then she pinched as hard as she could. He awoke with an ear-splitting scream.

"Good news, Elliot. Our test is done. Unfortunately, your spermatic cords had some sort of issue and snapped under the pressure. Your balls are now fully disconnected from your body." He stared up at her, eyes bloodshot, barely comprehending.

"Let me check if we have another test for you..." She tapped at the control panel next to him, entering parameters to find matching tests, but the search window returned nothing.

"Nope, guess not. Now that you've lost your balls, it looks like you're no longer a valid test subject for any of our quality control labs. You're free to go. Just make sure to get your payout, then you can head on home."

She unlatched each of his limbs and helped him off the frame. He was thin and short and barely weighed anything, but his legs were as limp as noodles. She eased him to the floor as he curled up in pain, still fully nude, clutching what was left of his manhood.

"My balls..."

"Elliot, I really need to get on with my testing. The bursar is out the door and down the hall, to the, uh..."

"To the left. Two doors down," Cathy finished.

"Right, thanks! Just head on over there and collect your check."

"I...I wanted kids, I wanted to have a family. What did you do to me? How...why..." He trailed off, his voice growing hoarser and higher-pitched as he started to cry.

"I understand, and I'm sorry about that. But the terms of your agreement should've been clear. I'm sure the ladies at the front desk can help you through the next steps with your balls or whatever. Just head on out now, please."

She pulled him gently but firmly to his feet and nudged him out the door. He stumbled awkwardly, wincing at each step, still staring in shocked awe at his barely filled scrotum that now hung well over a foot beneath his crotch as he hobbled off to the rest of his sad new existence.

"Finally," Olivia sighed. "I can't wait until he gets home and has to have his nuts taken out."

"I wouldn't count on that," said Cathy. "Modern medicine can reverse a cleanly broken spermatic cord. If he gets to a hospital fast enough they'll probably sew them right back on."

"Really?!" Olivia cried out. "Ugh! That...that's so annoying! I was so sick of him ogling me in every business class we have together. You seriously mean he's going to get to keep his balls, after all the work I did yanking them off of him?"

"Well, when you put it that way...Payouts usually process pretty quickly, with how efficiently our system runs. But sometimes, we tell guys we need to double check their identity...or even triple check. Just for these kinds of occasions." Cathy winked at her.

"I'll send the girls in the bursar's office a quick chat message and make sure they verify him *extra* thoroughly. We can probably hold him for processing for two or three hours, more than long enough for those sad little goolies to finish dying off."

Olivia matched her supervisor's wicked grin. "Oh god, thank you so much. Seriously I don't think I could go through junior year with him still staring at me. He'll be way less annoying without his hormones."

"Boys always are," Cathy agreed. "Now let's move on to your next test."

Suddenly, the lab door opened again, and a tall, older woman stepped in.

Her pantsuit was dark blue and well tailored to her tall, curvy body, perfectly hugging her wide hips and heaving breasts. Her black leather pumps clacked loudly against the ground with each step, their heels and toes tipped in the signature dull metal look of genuine BallKillers. Olivia recognized them as one of the top-shelf lines she drooled over, the kind that cost more than her entire summer intern stipend. A heavy pair of bronzed lumps adorned her ears, and Olivia wondered what well-hung man had given up his balls for her jewelry. She wondered if Zennia even remembered his name. Bottle green eyes sparkled beneath her fiery red hair, and Olivia recognized her from the cover of the business and financial magazines she devoured.

Zennia O'Darrigan, the trillionaire CEO of OverEasy, was everything Olivia ever aspired to and more. She tried to control herself while her inner fangirl squealed in delight.

Cathy waved at her boss cheerily.

"Hi, Zennia!"

"Oh my god...Ms. O'Darrigan!"

"Hello, Cathy. And nice to meet you, new girl; feel free to just call me Zennia. Mrs. O'Darrigan is my mother."

"Oh, um...nice to meet you too, Zennia! I'm Olivia. I'm an intern, and this is my first day, and...What brings you down here? I would've thought you had more important stuff to do. Not that QC isn't important, I just...Sorry, I'm sort of nervous!" Olivia babbled.

"It's alright, dear. I was just following the testing schedule, and I saw this was your first day. And I met your last test subject in the hallway on the way here — looks like you tested him very thoroughly. A BoySnapper test, if I'm not mistaken?"

"Truly, excellent work. Looks like you really yanked his balls out *right* at the roots. They were almost touching his knees. That is one scrotum that's never tightening up again."

"Thank you, ma'am!"

"Your next quality control test is for some of our most cutting-edge technology. It's a brand new product we haven't even announced yet."

"Really?!" Olivia could barely keep her excitement in.

"Yep. We're still struggling to get medical approval for broader release, but the government has concerns over 'male testicular safety', as usual." She rolled her eyes, then smiled secretively.

"And this happens to be one test I'm particularly interested in, so I want to see exactly how it goes, up close. So let's get on with your testing, shall we?"

Chapter 3: SeedSpray™ seminal extraction nanobots

Olivia tried to stay cool. On the one hand, she was already getting a chance to work on new tech; on the other hand, she had to do her job under the watchful eye of her boss's boss's boss's boss. This could be a chance to make a seriously career-boosting first impression...or to get herself blackballed from the testicular destruction industry entirely. Zennia was notoriously merciless, both in her corporate strategy and personal life. Olivia had read accounts of both the various hostile buyouts and divorces she'd instigated, and they invariably ended with her opponent losing everything, financially and otherwise.

Still, those court battles were always against men. The beautiful woman sitting in her lab seemed friendly and eager now. Maybe she was only that ruthless to men and their dangles.

"Well, have fun with Zennia," said Cathy.

"You're leaving me? Alone with *her*?" Olivia whispered, trying to stay calm.

"She's honestly super nice. To women, anyway. And yeah, you seem to have the hang of it and she can definitely help you if you get stuck on anything. Frankly, that last test was very interesting. The *snaps* as you yanked his cords out of his body, and the way his face went from gooning to betrayed when you yanked him right out of the gene pool..." Cathy shuddered, and blushed. She looked very hot, despite the chill of the lab.

"I need to take my break. Badly. I'll see you later." She walked out of the lab and hurried around the corner to the break room she'd said held the vibrator collection.

Olivia calmed herself and hit the button to load up the next test. A new nude man rolled in on his frame, squeaking in pain at each jolt of his rolling frame. Olivia noticed that his balls looked oddly shaped, as if they'd been badly damaged and healed up. She pulled out the slim tube with the next product and opened it up.

The vial of silvery liquid inside the padded container was only a few inches long. Next to it were rows of wide-mouthed corked bottles. She took it out and unrolled the tiny scroll of paper wrapped around it with her instructions.

"SeedSpray™ seminal extraction nanobots. Usage: extracting viable semen samples from men unable to adequately produce them naturally. Goal: force the subject to orgasm repeatedly, extracting as much usable reproductive material automatically via an experimental series of cavitation-induced pseudo-extinction pulses."

Olivia tried to make sense of the technical jargon. She'd vaguely heard of an 'extinction pulse' — the sad cumshot men often involuntarily released right as their testicles were smashed apart — but how did that relate to sperm samples? And what was 'cavitation'?

And what was wrong with this guy's balls? They each looked like they'd had a chunk ripped out of them, the puckered concavities on the backsides of each hefty testicle nearly large enough to shove her thumbs into. Olivia hoped she'd get to find out if they'd fit.

"Hello, Theodore." Zennia's tone dripped smugness.

"Zennia," He replied glumly.

"You know him?" Olivia asked.

"Of course I do." The titan of industry walked up to the bound, trembling man and cupped his chin with one hand, bringing his eyes up to meet her. "He used to work for me."

"Zennia...please..." he stuttered. "Charlotte signed me up. She promised it wasn't another self-defense demo. It's supposed to be fertility treatment, right? We're trying to have kids, and..."

"I thought OverEasy didn't hire men. For like, actual jobs."

"We don't, generally. Theodore was an experiment." Zennia cupped his testicles, almost lovingly, her finely manicured nails caressing every inch of their hairless, veiny surface. He shuddered, and the low-hanging fruits drew up half an inch. He was anxious.

"A very early employee, right when we'd started the self-defense line. We were just getting off the ground, still a scrappy startup, and had tons of product research to do."

"Oh. And lots of quality control tests?"

"Exactly. We needed an absolutely *enormous* pipeline of balls coming in to run tests on — well, a fraction of what we have nowadays, but with resources limited it was a big ask. We recruited the obvious way: a hot girl in a skimpy outfit with a big smile. She'd present it as a research opportunity for quick, easy money, and they'd be too busy staring at her breasts to read the fine print on the contract."

"But we still weren't getting enough testicles to test our product ideas on. Obviously, I never wanted to hire men, but startups sometimes need to make some compromises to get by. And Theodore proved a very capable recruiter, weren't you?"

"I...I worked hard, Zennia. I tricked...a *lot* of my friends into coming here." His voice dripped with guilt. "And you still..."

"Tricked? You just informed them of an exciting chance to make some money! All those guys at your gym, all of your childhood friends, your college buddies — you sold them *all* on the OverEasy mission, and we recompensed them exactly as per our contracts. You were an excellent employee."

"But my favorite recruiting trick of yours — that family reunion! Remember? Three generations of fat Klejnotski balls, their idiot owners signing up one after another while you convinced them it wouldn't hurt. All your brothers, your cousins, your uncles and everyone. You got every male in your family line to sign up!"

"You'd promised me that big bonus, Zennia. And Charlotte wanted that expensive wedding, and she'd just bought another new car, and we needed some way to cover it..." He was tearing up. "I didn't know you'd pop them *all*."

"Ooh, but I did, didn't I? Every testicle in your family is *gone*. Because of you." She frowned quizzically. "Well, not quite all of them, I suppose." Her thumbs drifted to the damaged backsides of his nuts.

"What happened to his balls?" Olivia blurted out, then blushed at her own rudeness. Zennia turned to face her and chuckled.

"This was Charlotte's doing, wasn't it? You two were so cute together. She's a product designer for Self Defense; these two met at work."

"Aw, how cute!"

"She's always been quite ambitious, you know. And very...headstrong. Very sure of what she wants, and what she needs. She really is the perfect manager / wife for a pliable guy like Theodore. That was how she convinced you to sign up for a test too, right? She had this brilliant idea for a cute little keychain weapon..."

"She invented the BallCracker?!" Olivia squealed. "That's one of my favorites!"

"Indeed." Zennia grinned. "And she let us test it on her own husband, right after their wedding."

"She promised...You two had *promised* you wouldn't sterilize me." Olivia noticed the pitch of his voice was off, distinctly similar to how guys sounded after a run-in with her own BallCracker. But his sack was too full for him to be a eunuch. What was going on?

"That's not quite true, Theo. We promised we wouldn't *neuter* you. Destroying your testicles entirely would've been neutering. Taking you out of the gene pool is just sterilization. And Charlotte had been trying to get you to schedule your vasectomy after she decided to be child-free. You were just so *reluctant* and kept insisting you needed to think about it, talking about your 'legacy' and all that nonsense. She had to trick you into even coming to the office that weekend, remember? Told you it was some awesome couples sex club or something?" She laughed. "It's the same way I got my dog neutered: I made him think he's going to the dog park until we were parked outside the vet."

"I did the test myself. It was simple enough. I slipped the half-baked BallCracker prototype between his legs, and tapped that little button twice, and — *pop pop!*" Zennia mimed two balls popping in her hand. "It worked pretty well, for a prototype."

Olivia frowned. "But...he's still got his nuts. Doesn't the BallCracker pop their balls every time?" She imagined any of the boys she'd used her own BallCracker on might have been able to salvage their manhoods, and shuddered at the thought. Every guy she'd used it on fully deserved to be evicted from the gene pool; the idea that there was a single ball left intact between their legs was nauseating.

"Like I said, it was the prototype. Indeed, the modern version is guaranteed to fully rupture a testicle of any size in a single *pop*. We've made very sure of that."

"Anyway, even that prototype was enough to shatter his epididymis, and he passed out. Charlotte brought him to the hospital to get stitched up, and unfortunately the doctors were indeed able to save his balls, but there were some consequences. His hormones are gone, obviously."

Zennia pointed to the projected bar graphs of his testosterone and other male hormones. The rectangular bars were fully empty, and their readouts flashed 0%.

"Couldn't he get hormone therapy?"

"Theodore, has Charlotte let you start testosterone? She goes with you to every doctor's appointment to make sure you're not asking for some without permission, right?" Zennia asked. He didn't answer, but his sad look at his limp cock and shattered balls said enough.

"Wow. She's really got him under control. That's some serious relationship goals, there." Olivia smiled, then frowned. "But...His sperm count still looks super high. Look, right there — nearly 20 million per milliliter! He's not exactly a stallion, but he's got enough

swimmers sloshing around inside his pair that he can reproduce. Didn't you say he was sterile?"

"Correct on both counts. With nuts as big as these, he has no problem *producing* sperm — but he's missing a couple particularly important bits." Zennia mercilessly twisted the fat, low-hanging pair around; as low-hanging as they were, there was more than enough slack to expose their puckered backsides. Theodore squawked as she played with his balls roughly.

"Both of his epididymides are almost totally destroyed. There's just enough intact to pump blood into those two swollen orbs, so they haven't died off yet, but his sperm can't make it out of his nuts anymore."

"It's true." He said sadly. "I...I can still ejaculate, when Charebear feels like letting me, but it's as clear as water, and the doctors said there's no sperm inside at all. But it's not so bad. My monthly milkings still feel incredible, when I can manage an erection, and she lets me go down on her and do whatever she wants. I've been trying to find my peace, and move on after what Zennia did to me."

He took a shaky breath, staring daggers at the imperious redheaded CEO. "I thought I was done with OverEasy for life when I woke up in the hospital and she told me my employment was terminated. I hate what I did while I worked here, and what happened to me, and I just wanted to put it all behind. But now that Charebear's changed her mind about kids *again*, and she wants to be a mother, and I can't get her pregnant — *guh!*"

Zennia flicked his obviously extra-sensitive nuts and continued.

"As I was saying, these two disgusting gonads contain the only remains of thousands of generations of successfully reproducing males. And every single sperm just stays trapped inside his damaged balls until they dissolve and his own body absorbs them."

"I just wanted to have kids..." he said sadly. "Charlotte promised this would work. So...I'm back. One last time, and then I'm never coming back to this awful company."

"Wow." Olivia said. "That's so..."

Tragic? Funny? Sexy? Working at OverEasy seemed like a constant mix of all three, and she couldn't decide. "So cool!"

Zennia smiled. "It certainly is. But now that Charlotte's decided she's ready for kids, it's time for us to extract his sperm for her." She plucked the swirling silver vial from its cradle, holding it up to the light lovingly, then handed it to Olivia. "Now you can get to

work, Olivia."

Olivia tried to make sense of the wordy instructions on her own, but Zennia was happy to help.

"So, do you know what cavitation is?"

"No."

"It's basically a way to harness the ambient pressure of a high-pressure environment to extract a high force out. Have you heard of pistol shrimp? They live on the bottom of the ocean, and they have these special claws that can create a tiny bubble of low pressure. Beneath the weight of all the water above them, the bubble slams shut in a nanosecond, expelling an enormous amount of energy. Temperatures can actually reach hotter than the surface of the sun!" Her composed superiority gave way to an almost nerdy infodump as she went on, excitedly.

"So...that's medicine to...cavitate his balls?"

"It's not medicine. They're nanobots." Zennia tilted the vial, the silvery stuff moving oddly, as if it had a life of its own.

"We inject them into his urethra. These clever little girls slide down his cock and into his balls. They'll swim through his tubes and spread themselves all throughout his testicles. And then, they cavitate."

Zennia made a motion with her hand, like a bubble expanding outward and popping.

"They quickly expand and detonate themselves, leaving a little void behind. All those sperm-producing tubes inside his nuts are bound up so tightly, the pressure is enough to —*BAM!*— slam the sides of the little cavity inside his testicle together and cause serious trauma."

"What?!" said Theodore. "No no no no...Charebear promised it wasn't some sadistic ball torture experiment again. It's for my fertility. She promised. You promised! You promised you wouldn't kill my balls, and guaranteed fertility, and —"

"You might've misheard. I promised we wouldn't *definitely* destroy your balls. Olivia, a lot of our tests are guaranteed to leave our subjects without their testicles — well, you know what I mean, you *just* ran a BoySnapper test. This one doesn't come with guaranteed

castration; since it's experimental, we really don't know how it'll go, and there's a chance you get to go home with something intact between your legs."

"No...Oh god. Goddamnit." Theodore had started crying. "Charebear promised it was safe, and well-tested, and would guarantee us a chance for kids."

"Well, that last part I *am* sure of. You see, every time one of your testicles gets damaged, your limp little dick will forcibly expel a few drops of your sperm. Obviously you're familiar with extinction pulses, Theodore — you've certainly caused enough of them! This will be a sort of a series of micro-pulses as each nanobot destroys another little chunk of your nut."

Olivia could feel herself getting wet. This sounded like the most vicious of her tests yet. She wondered if it'd be too early to take her break after this one.

"So, Olivia, want to do this?"

"No! Please, don't!" begged Theodore.

"Hell yeah." She unscrewed the top of the vial, pulling out the inner eyedropper. Following the instructions carefully, she stroked him gently, swirling her fingers beneath his foreskin and smiling up at him. She could feel the diminutive gland twitch and spasm, nearly managing to get hard before falling flaccid again. But eventually, she managed to coax the reluctant, hormonally deficient little manhood to a full erection. He struggled and moaned, but his bonds kept him in place as she used the dropper to suck up the contents of the vial and deposit it carefully right into the slit in his cocktip.

Getting the liquid into his cock would've been difficult if it didn't move on its own; the microscopic robots seemed almost eager to slide into Theodore's manhood, and every drop made it into his shaft. Olivia could see the bulge moving down his shaft as the SeedSpray bots traveled down his urethra and through his nutcords, into the insides of his testicles.

"Ouch! Ah..."

"What does it feel like?" Olivia said.

"Oh...*oh*. They're so...it's weird. I can feel them inside me. They burned my dick a little bit when going down, and I can feel them inside my balls, and now they're...cold. And kind of tingly. I can feel them moving *inside* my nuts. It's...it's not that bad. It's actually kind of nice, I guess? Maybe this won't be so bad."

Olivia rubbed her fingers all over his scrotum, exploring the pair of gonads. Months or years of priceless sperm were trapped inside these two organs, and she could now feel the subtle bulges of the nanobots implanted all throughout. If she rubbed carefully, she could feel the subtle bumps coating his balls through his scrotum, each tiny protrusion the home of one of the eager little bots. Reading the test instructions, she verified that they were behaving correctly; the regular bulging throughout his manhood indicated that they had successfully distributed themselves through every cubic millimeter of his testicles.

"It's actually *really* nice. I think I haven't felt this good since my balls were still healthy. They almost feel full, and intact again. I... feel like a normal man. Thank you, Zennia, I thought —"

"Olivia, activate the cavitation sequence," Zennia instructed.

Olivia tapped the relevant button on the control panel.

pop. SHLICK!

One of the bulges suddenly expanded, and disappeared. At the same time, a yellow circle the size of a dime suddenly appeared on the projected wall-size cross section of his testicles. The scanner showed both organs a constant healthy dark or lime-green throughout, but the newly formed tiny cavity was noticeably less healthy. His Overall Effective Testicular Functionality dropped down a fraction of a notch as well.

"AAAAAAHHHHH!!!" He squealed in sudden pain. "OH *FUCK!*"

"Olivia, Make sure to collect his sperm!" Zennia snapped. Olivia rushed to uncork a jar, and slid it over his cockhead just in time to capture his seed. The thick, white sludge oozing out of his cock slit looked different than a normal cumshot.

"Concentrated cum," Zennia explained. "A natural orgasm is watered down with his precum, his prostatic fluid, all this useless nonsense men expel when they're experiencing actual sexual pleasure. The cavitation process bypasses all that and extracts pure, ultrafertile semen directly from his testicles."

"Wow," Olivia marveled at the pastelike sludge slowly creeping down the side of the glass vial.

pop. SHLICK! pop. SHLICK! Two more tiny bulges disappeared as his OETF inched down again, and his cock drooled even more sludgy cum.

"OH GOD! OH *FUCK!*"

"Sir? Theodore? What does it feel like now?" Olivia probed. He was starting to hyperventilate, his eyes glued on the diagram of his testicles as the nanobots inside mindlessly ate away at them.

"It's like...A burning hot, sharp pain. It's...it's —"

pop. SHLICK!

"AAAAUUGGHH!" He bucked and produced another tiny splurt of cum. "Every pop is like...explosive, burning agony. Like a tiny rupture, but actually *inside* my ball. It's as bad as when they tested the BallCracker on me, but at least that was over fast. I can feel my balls...*disappearing*, slowly. Please, God, please stop the test!"

Pop pop pop pop pop pop pop. SPLURT! A row of bumps along the front of his left ball disappeared in unison, opening up a streak of orange across his testicle on the display. He spasmed forward and his cock shot out a massive wad of thick, lumpy semen.

"OH GOD WHY, WHY JESUS CHRIST WOULD ANYTHING HURT THIS MUCH!"

"Oof. That sounded especially bad," Olivia purred.

"To maximize seminal extraction, the nanobots are programmed to go off irregularly," Zennia explained. "If they had a regular, predictable rhythm, his testicles could actually start to adjust to it and sort of...defend themselves, in a way. By making the cavitation pops speed up and slow down unpredictably, he never gets used to the sensation, so his balls can't help but ejaculate erratically and forcefully."

"Yeah, makes sense!"

"Please...please at least pause them, just for a second." His voice was ragged.

POP! SHLIIIIICK. His cock spat an especially gooey tendril of cum into the bottle.

He bucked, and sobbed. "*PLEASE!*"

"Nope! I've got a job to do here, Theodore. *Pop. shlick.* He sobbed quietly.

After a few minutes of alternative *pops* from his nuts, dribbles from his dick, and screams from his mouth, the collection vial was finally full. Olivia pulled it away from his cockhead and held it to the light. Semen overflowed over the vial's edges, dribbling down the sides and puddling on the floor. He looked at it desperately, obviously aware that every drop of cum drying on the floor represented a bit of his precious nutmeat pointlessly wasted.

Olivia corked the bottle, spilling more excess cum in the process, then wiped all the semen that had spilled with the handy industrial-sized box of bleach wipes. The nanobots didn't stop their work while she cleaned up, *pop* after *pop* going off and forcing more cum painfully out of his dick as she carefully eradicated all the uncollected swimmers. Finally getting her next collection bottle ready, she aligned it with his cockhead and began her next collection.

But the *pops* didn't seem to come. Olivia frowned at his dick and balls, confused.

"Is it done?" Theodore asked hopefully. "You just tortured an entire vial of condensed cum out of my balls. That's definitely enough for a sample at my fertility clinic. Can you please pull the nanobots out, and I can go home with part of my sperm count intact?"

"Nope," said Zennia. "Olivia, looks like the bots are stuck. Some percussive repair might help," she smiled.

Percussive...repair?

"Oh, of course!"

Olivia punched him in the balls. One, two, three scrotum-flattening hits landed between his legs with a wet splat. At the third one, the nanobots jolted back to life.

Pop. Pop. SPPLUUUUURTTT!

"AAAAAH! GOD FUCK!" His cock obediently began drooling again, the cum seeping out of his cocktip ever so slightly clearer than the first round. Unsurprising, since his testicular chart showed a full twenty percent drop to his fertility since starting. Another rapid fire series of *pops* tore through his scrotum, the chart showering a dark orange cluster of damage forming deep inside his right testicle. Olivia grabbed the beleaguered nut with her free hand, and could literally feel tiny holes and microfissures opening up in it beneath her hand, the densely packed meat of a healthy testicle getting ever so slightly spongier with each tiny *pop*. She imagined the nanobots inside, dutifully expanding themselves and self-destructing, emaciating his testicle more and more in an attempt to force more of his seed out of his malformed manhood.

She truly wondered if anyone in the world enjoyed their job as much as her. She could feel her thighs slicking as the texture of his balls got spongier and spongier, and smiled up into the poor man's eyes. Theodore's head lolled to the side, and the pain had stolen

his words by this point, but his eyes connected with hers. She could see him silently begging, pleading for some scrap of mercy, some end to the pointless destruction being wreaked upon what remained of his manhood.

"Aaaaaahhh." A softer moan interrupted her reverie. Olivia turned around to see Zennia with her skirt hitched up, leaning back in the chair as she masturbated brazenly. She was staring at the projection of his testicles, her hand working her pussy gently, and when she saw Olivia watching her she smiled back.

"Don't mind me. Just enjoying the show." She bit her lip and smiled, her face flushed from arousal.

"Um." Olivia didn't know what to say.

"I know you're still a bit shy. That's okay. You'll get used to this. At OverEasy, women's pleasure is *never* inappropriate." An especially loud *POP* sent Theodore shrieking, and Zennia slid her fingers inside herself and moaned.

Olivia had always considered herself completely straight. But the sight of her lifelong idol's strong, naked thighs and thick hairy pussy lips had her seriously reconsidering. Zennia was so strong, so utterly self-assured she could just masturbate to a man being castrated for science. Olivia wanted to be her. Another *pop* brought a region of dark red to the inside of his left nut, now, and she felt the gonad give way even further beneath her hand. Her pussy was so wet, she was starting to get seriously unprofessionally distracted.

She was so distracted she didn't even notice the cum dribbling down her hand; Theodore's testicles had filled his second vial of semen. In her negligence, fist-sized globs of wasted semen had splattered onto the floor. She pulled the jar away and corked it again. His semen had gotten thinner and thinner as the nanobots ate away at his testicles, and Olivia held up the two white vials to compare. The bottom of the first one was as thick and white as paste, but it had started to become more watery near the top, approaching what looked like normal cum. The second jar showed a more severe gradient. The bottom layer of the jar looked just like normal cum too, if slightly more watery than the top of the first. But each layer was clearer and clearer, and the top layer was closer to grey than white now. His cock continued spewing and spurting as she compared them, and he whined and coughed as the bots *popped* away inside his sack.

On the readout, both balls were nearly entirely between orange and dark-red, indicating severe, irreversible damage throughout. His sperm count readout showed only about five million per milliliter, still more than enough to reproduce but only a quarter of what he had

started the day with. And his OETF was well below the halfway point. She noted every bit of data before reaching for the third and final collection vial.

"No more...Please, they're almost dead," his begging wasn't as desperate, just a monotone whisper as he choked out the words through the pain in his balls. "Please. You...you extracted so much. Just please let me keep the rest. Please."

"Nope, we're not quite done yet." Olivia shakily placed the third and final vial against his cock. She wasn't quite ready to masturbate openly in front of other people, but she was so turned on she couldn't help but rub her legs together, trying to stimulate her twitching clit enough to soothe her arousal.

The nanobots had stopped again. Without hesitation, she pulled her hand back and punched him, hard, over and over and over. His balls felt extremely mushy, deforming easily and letting out wet *splats* and *crunches* with each brutal impact of her fist. Finally, the telltale *pops* began again, and she got her vial in place just in time to capture the watery dribbles he began to release. She looked up at him, and was delighted to see the last bit of light leave his eyes. Clearly, he'd been holding out for the chance to go home with his genitals still intact, and she'd finally punched the hope out of him entirely.

"Come on. I know it's painful, and you're probably not going to have anything left of your balls when you're finished. But look on the bright side. You're finally going to get to have kids!" Olivia said cheerily, playfully tapping his twitching ballsack. "Just give us the rest of your semen and you can go home and impregnate your wife. I mean, you'll have to use a turkey baster or something, since you might not be able to manage an erection ever again without your testicles, but won't that be nice?"

"I won't be able to...get *hard*?!" he squeaked.

"Oh. Um, yeah, sorry, I was just trying to be realistic. Those little nanobots are absolutely destroying your nuts." She pointed to the OETF meter, creeping dangerously lower and lower.

"And it sounds like you'd been having some erectile dysfunction problems already, so having your goolies honeycombed apart by nanobots definitely won't help. So you can probably say bye bye to your boners once we're done. But don't worry about that. You'll get to reproduce, right? Surely that's worth losing what's left of your withered manhood!"

"Oh *god*!" He bucked forward as another massive series of *POPs* erupted out of him. Most of his right ball was now completely dark red on the display, with regions of black starting to bloom throughout. His nuts were finally dying off completely. Each

pop brought a much softer *squick* than they had at the beginning, and each explosion only produced the thinnest trickle of watery cum, barely a streak of opacity present in the pathetic emissions.

"Ha....*haaa*. The pressure must be...*gone!*" Even as she rubbed herself, Zennia was explaining what was happening. "Without all the semen and tubules packed tightly together — *AAAHHHH!* — there's barely enough pressure to force any sperm out of his nuts. At this point, the nanobots are just destroying his balls for *literally* no REASON OHGODFUCKKKKK—" She bucked forward with her mouth half-open, her body twitching so hard she lifted her ass fully off the chair. Olivia and Theodore both couldn't help but stare as the beautiful woman climaxed messily, rubbing her clit furiously and gushing quarts of girl cum onto the floor. Another sad *squelch* emitted from Theodore's nuts as the nanobots inside struggled to force another watery trickle of infertile cum out of him.

Olivia blushed even harder. The contrast between Zennia's relaxing, natural orgasm and the unnatural splurts being wrung out of Theodore's testicles was just too hot. She might really need to take her 'break' after this test.

Finally, the pops and squelches inside his ballsack stopped. Olivia corked the nearly-full third jar and set it aside, then began her routine punches to his ballsack. She couldn't detect any resistance from his testicles at all anymore, and instead of the familiar *thump* of fist meeting gonads, each punch just elicited watery *splishes*, as if she was boxing a water balloon. His sperm count was so low the display no longer displayed millions of swimmers per milliliter; if he had any fertility left, the display helpfully informed them that it was below the detection threshold.

But something remained intact of his manhood. The bar marking his OETF had barely a sliver of red separating its end from the fully empty hormonal bar above. But it definitely wasn't 0%.

After a few dozen punches into his black and blue scrotum, the nanobots refused to restart. She stood up and put her hands on his shoulders, switching to knees to try to get even more force in her blows. He gagged and choked as she held onto his shoulders and rammed her knee into his gonads again and again, the tiny sliver of his OETF reading shrinking even more before she finally gave up. The nanobots were completely spent.

"Well, congratulations. Looks like our test is complete. And look!" Somehow, the poor man was still awake through his ordeal, and Olivia waved to get his attention, pointing to his OETF reading. "I know that was pretty rough on you, but you've still got some

manhood left. Looks like..." She squinted at the flashing red number next to the bar. "About 0.2% of your nuts are still intact. I know we destroyed a *lot* of them today, but you'll keep something!"

"Oh god...Thank God." He stared despairing at the limp, saggy scrotum between his legs, his eyes watering as if he barely recognized the thing as what remained of his balls.

"Thank Christ. Maybe a hospital or a really good urologist can still heal them..."

"One moment, Theodore." Zennia composed herself. "I counted every pop, and there weren't enough. You've still got some inactive nanobots inside your nuts, Theodore. Inactive duds, probably, but you're not leaving with my property still inside you."

She shimmied out of her skirt and walked up to the naked man. Despite her age, her bubble butt was beautifully round, muscles shimmering up thighs that looked as if they were carved from marble. Olivia hoped she was that fit when she got to be Zennia's age. Bending down, giving the young intern a jaw-dropping view of her puffy slit peeking out between her thighs, she grabbed what was left of Theodore's testicles roughly.

"No, Zennia...please. I barely have anything left," he whined.

"Quiet. You are *not* taking our premier prototype nanobots home with you."

And Zennia began to work his balls over, squeezing and crunching the barely-intact organs. Theodore let out one last scream, desperate and tragic and wordless. Olivia could see a silvery trickle drip down his cockhead, identical to the goo she'd shoved down his urethra, as Zennia extracted every one of the remaining nanobots.

"Aaaand..." Zennia twisted hard, and two tiny little *pops* came from inside her tightened fist. Theodore squawked louder than ever.

"There. Got them all." Zennia ground her fingers into his nutsack, rolling them through his sweaty hairless flesh to squish every last solid chunk, then held the meager handful of fluid aloft. A beeping klaxon erupted from the testicular display.

"OETF CRITICALITY INCIDENT. TESTICULAR FUNCTIONALITY: FULLY COMPROMISED. QUALITY CONTROL TEST COMPLETE." The OETF meter was fully empty now, matching his hormonal readout with a flashing 0%. Theodore stared, slack-jawed, the reality of what had just happened setting in: Zennia had just popped his balls for the sole purpose of extracting a tiny amount of dysfunctional product.

"Remember, never let test subjects take home any testing materials."

"Of course," Olivia replied huskily. "Do you need to save those for — for analysis, or..."

"Nah. With billions of nanobots, it's statistically impossible to ensure all of them work properly. These are just duds." Zennia wiped her hands off on a nearby rag, then scrubbed them down with bleach wipes.

"Well. Sorry about your balls, dude. I don't think we'll be running any more tests on you." Olivia unlatched the cuffs on his ankles and wrists and pushed him out of the harness. He collapsed on the floor, shivering and sobbing and clutching his ruined groin.

"Sounds like you know the drill from when you used to work here, but in case you don't: the bursar is down the hall, and —"

The door to the lab burst open, and a woman strode in. Her high heels clacked against the floor, and her earrings, jewelry and well-tailored dress were impeccable. She waved cheerily to Zennia.

"Hey, Zennia!"

"Hey Charlotte. We just finished with your husband's fertility extraction. Olivia should have your semen ready for you."

"Oh, you're Charlotte? Hi! I'm Olivia." Olivia peeled a glove off and stuck out her sperm-free hand. "I'm a huge fan of your work — I absolutely ADORE my BallCracker!"

"Thanks! You're the new QC intern, I assume?"

"Yup! And I got to run the test on your husband! Unfortunately, his testicles didn't survive, but good news: the nanobots got more than enough semen out of him for you to have kids!" She proudly held up all three overflowing bottles, goo oozing out of their corked tops.

"Ah. Of course." Charlotte smiled, but didn't take the vials from Olivia. Instead she walked over to her eunuch husband and squatted down next to him, rubbing his naked back as he shuddered in pain.

"I...They popped my balls. They castrated me, Charlotte. But I...I made sperm for you. I did it. I lost my balls, but we can be parents. We can be a family."

"Right." She grimaced. "This is...sort of awkward timing."

"I just...Theodore, dear, I've really enjoyed our time together. And I know I've been really wishy washy on kids, and it's been a big burden for you, but just...on the way over here, I realized something: I actually *don't* think I'm ready to get pregnant yet."

"That's okay! We can freeze it, and wait, and..."

"Er, let me be clearer. I think I'm not ready to get pregnant with *you*. And I'm not sure I ever will be."

"W...what?"

"I just...I really don't think this is working out, Theodore. We've been married for two years, and you're not very...I mean, I know you've always been very obedient, and you've given me so much, but I've been mulling it over on the drive over here, and I really just need someone more manly."

"We...I...We can go to counseling..." Olivia could hear his high-pitched voice going thin and weak.

"No. We can't. I'm sorry Theo, it's over. I've already got my lawyer drawing up paperwork for the divorce. You should try to find one soon."

The room went silent.

"Oh." He shakily stood up. "And, you just decided..."

"I've been on the fence for a while. When I dropped you off this morning, I was like ninety percent sure I wanted to split, but I was hoping I'd change my mind throughout the day. But I finally settled it. I just don't think I can continue this marriage."

"Charlotte, I understand this is a hard time for you — divorces can always be emotional." Zennia put a hand on her shoulder. "Let me know if there's any way OverEasy, or I personally, can help you in this difficult time. I can recommend my lawyer; Mrs. Eierganef helped me get every cent out of my husband." She completely ignored Theodore, who had started to sob again.

"Thanks for the recommendation, I've already got her. And I'll be fine. He signed an ironclad prenup, which should make things easier. Speaking of which...new girl — sorry, Olivia — where did you say the bursar's office is?"

"Down the hall, to the left."

"Right. Given that I'll be taking all of his assets in the split, Zennia, do you think you can have the girls in finance just make the check out directly to me?"

"Yes, of course. I've been through this with my ex-husband, and you have quite an ordeal ahead of you — you'll get it all eventually, but the courts can take *forever* draining all of his accounts, and getting all of his house and car deeds transferred to your name will be such a hassle. We can at least make this part easier for you."

"Perfect, thanks."

"Oh, and speaking of his assets: These are yours too!" Olivia cheerily held up the three sticky vials that contained every last wriggling sperm Theodore would ever produce.

"Ah. Right." Charlotte wrinkled her nose in disgust. "I...don't think I'll need those anymore."

Theodore stared up desperately at the three vials of his fertility. "Oh thank god. I can...I can still freeze them. If I find another woman, we can..."

"Nope!" Zennia swooped in and scooped up all three vials. "If Charlotte doesn't want them, ownership transfers to OverEasy. We have lots of tests we can run on these."

Olivia stared down at the soon-to-be divorced eunuch. He looked so desperate and pathetic. Neutering a man was fun, of course, but the absolute emotional, sexual, and impending financial ruin was just so insanely cruel.

Charlotte sighed. "Zennia, maybe we can let him have one of the vials? I'm sure we have enough semen in two of them for whatever testing you're thinking of. He's castrated, and I'll be taking absolutely everything he ever loved and owned, so I'm okay with letting him keep a *chance* to have kids, at least. Even if it's not with me."

The CEO grunted disapprovingly. "Fine. Here you go, Theodore." She held out the third vial of semen to him, the last one he'd managed to produce. It was almost completely translucent, only a few thin strands of cum dancing in the watery contents.

"If you want to freeze this, you'll need to get to a sperm bank *very* quickly."

The poor man stared at the vial desperately like a starving man looking at food. He stayed on the floor, curled up with one hand between his thighs, but reached up with his other trembling hand to receive the irreplaceable artifact.

"Just be careful, it's rather slippery from —"

CRASH

Zennia had let go seconds before he'd gotten a solid grip on it. The vial fell to the floor and shattered, its contents splattering across the floor.

"Oops."

Theodore just stared at the ground.

"No...*no*..." And those were his last words before he began wailing again. Charlotte grimaced at the fine shards of glass irreversibly mixed in with the splatter of cum on the floor.

"Oh. Sorry, Theodore. Should've been a little more careful there — that wasn't exactly the time to be clumsy. I know you're in a lot of pain, and still processing everything, but I really do need to head out now. I've got a meeting with Eierganef right now to discuss our strategy for our divorce. Let's go, honey."

Charlotte dragged him to his feet, wrapping his arm around her as she supported him. The two soon-to-be-exes walked out of the lab, Olivia watching Charlotte's tight bubble butt swaying sexily as his own naked form staggered next to her.

"Well. *That* was certainly an interesting test." Zennia smiled, and Olivia joined her.

"Make sure to clean up that glass on the floor. Be careful not to cut yourself. Oh, and make sure to scrub and bleach away any of his leftover sperm. We don't want someone accidentally getting pregnant around here."

"Zennia, what tests are you going to do with those?" Olivia said, indicating the two remaining vials of Theodore's cum.

"I don't know, to be honest. I didn't really have anything in mind. We'll just freeze them for now, and if we find a reason to use them before they expire, we might use them. Otherwise, they'll just get tossed out with the rest of the medical waste in a few years."

Olivia couldn't believe the absolute unfettered cruelty of the CEO. She knew OverEasy was dedicated to destroying balls at an industrial scale, but she'd never realized how thoroughly they screwed over men in every way. It was as if Zennia took every opportunity to not just hurt his testicles, but rip out Theodore's very soul. Ending the bloodline of every single man in his family, taking his fertility away not once but twice, helping Charlotte suck every penny out of him she could...It was unbelievable. Cold. Calculating. Incredible.

She could've easily sent him home with all three vials. She could've let him keep his nuts. She could've found another test subject for the BallCracker in the first. But the beautiful woman seemed to have a bone-deep instinct for the cruelest, most life-ruining path for Theodore at every point, and Olivia had a feeling she treated all men the same way.

She wasn't just a cutthroat CEO, she was a man-hating, nut-shattering *goddess*. Olivia could feel her cheeks flush with heat once again.

"Um, Ms. O'Darrigan, I was wondering...could I take my break now? Cathy mentioned a... dildo library, somewhere, if that's okay?"

The CEO smiled benevolently. "You can masturbate now if you want, dear. But you might want to stick around for the next test, or it'll get assigned to some other lucky girl. The system is supposed to be random, but as CEO, I can override that. I'm sure you've been excited about actual self-defense tests, not just fertility extractions and sex toys, and I've lined up a Sterilizer test for you." She winked at Olivia.

"And this one will be what we call a Comprehensive Batch Test. Lots of product. Lots of balls. Lots of..."

"Castrations?!" Olivia said excitedly.

"Exactly."

The intern nearly came on the spot.

"...I can hold out for one more shift."

"I thought so. I have to run now — I'm executing this massive merger with some male-owned company, and I've got a meeting with legal to figure out how to maximize our earning potential and leave the owners with as little as possible. I know Cathy quite well, and I expect she's just about done with her 'break!'"

Right on cue, Cathy burst into the lab, looking flushed, sweaty and sated. Seeing the empty vials of nanobots, she groaned in mock frustration.

"Did you just do the first SeedSpray nanobot test?! Aw man, I'd been looking forward to that!"

"There will be many more later, Cathy, once we amp up production. Now, get back to work. Although frankly, this is one intern I don't think needs too much supervision — she's taken to the OverEasy mission quite well."

Zennia winked at Olivia, and she felt her heart beat faster. She really did prefer dick, normally, by a lot. And besides some drunken fondlings with her girlfriends, she'd never explored her bisexual side. But the power and aura Zennia exuded was...intoxicating.

"I'll see you later. Have fun with your Sterilizer test."

"God yes, I will. Have fun with your...uh, merger." Olivia wondered how badly Zennia was about to fuck over her competition. Could she figure out some way to take their balls *and* their assets? She sighed, her eyes glued dreamily to the tall woman's curvy butt as she sashayed out the door.

"Hey. Olivia." Cathy snapped her fingers at her. "I get it. Zennia's hot as hell. But we've got to get back to work."

"Uh. Right. Right!" She swallowed hard, embarrassed to get caught leering. "Let's get on with it."

Until next time

You made it to the end. Hopefully your gonads are more functional than the ones you just read about.

I love hearing from readers. Whether you've got feedback, a request, an oddly specific scenario you've been dying to see written, a unformatted wall of text meticulously describing each and every ballbusting fantasy you've ever masturbated to, or just want to correct all of my typos, drop me a line.
